USDA report day – US S&D’s attached

USDA released their April supply and demand outlook

Reaction: Neutral to friendly feedgrains and neutral to slightly bearish soybeans. We tightened up our trading range for May soybeans & corn and raised our trading ranges for all three US wheat contracts.

USDA OCE Secretary Briefing

<https://www.usda.gov/sites/default/files/documents/april-2021-wasde-lockup-briefing.pdf>

CBOT soybeans trended lower post USDA report and wheat trimmed gains. CBOT corn sold off post USDA report which created a buying opportunity for some longs. Prices dipped as USDA made a less than expected upward adjustment to US exports by only 75 million bushels (trade was looking for 100-to-200-million-bushel increase). USDA’s outlook on 2020-21 corn exports indicated we could see some current crop year corn commitments rolled into new-crop at the end of the marketing season, or USDA acknowledging actual corn shipments need to increase in order to convince the government US corn exports could reach commitment potential. US corn stocks dropped a more than expected 150 million bushels. Corn for feed was upward revised 50 and food use was down 25. They lifted corn for ethanol by 25 million bushels, a surprise in our opinion. Corn exports were taken up only 75 as we mentioned. World corn stocks were lowered 3.8 million tons to 283.9 million, 19.1 million tons below 2019-20. Argentina corn production was lowered 0.5 million tons to 47 million. Brazil was left unchanged at 109 million tons.

Source: USDA and FI

US soybean stocks were unchanged but USDA did tinker with demand, by taking exports up 30 million bushels, offset by 10 million bushels lower crush, 2-million-bushel lower seed and 17 million downward revision in residual. US soybean oil food was up 400 million pounds, and biodiesel use lowered 400 million. This could be a glimpse of what USDA is thinking for soybean oil for renewable biodiesel use. Next month USDA will add biofuel use, replacing soybean oil for biodiesel use. USDA made a bearish move by raising Brazil exports by 1 million tons to 86 million tons of soybeans for 2020-21. Brazil soybean production was taken up 2 million tons to 136 million while Argentina was left unchanged at 47.5 million tons.

trimmed another 10 million in the next report. By class HRW wheat stocks were upward revised 28 million bushels, and durum, HRS & SRW wheat stocks were each lowered 5 million bushels.

World wheat production was lowered 300,000 tons and world stocks decreased a large 5.7 million tons to 295.5 million, 4.5 million below 2019-20. USDA noted “World 2020/21 consumption is increased 5.1 million tons to 781.0 million, mainly on higher feed and residual use for China. Auction sales of China’s old-crop wheat stocks continue to be large and domestic corn prices in China remain at a premium to wheat. This is expected to further increase China’s 2020/21 wheat feed and residual use, raised 5.0 million tons to a record 40.0 million.”

World Weather Inc.

MOST IMPORTANT WEATHER IN THE WORLD

- Brazil's Safrinha corn areas are still drying down and little change will occur for ten days with the exception of central and northern Mato Grosso where a favorable mix of rain and sunshine is expected
 - Crop stress will slowly intensify over the forecast period
 - Showers that occur April 19-24 are unlikely to bring a soaking rain leaving soil moisture short to very short in some areas which is not good with monsoonal precipitation ending shortly thereafter
 - Fear of dryness during reproduction is still running very high
 - 60% of the corn crop was planted after the Feb. 20 optimum yield date and 15-20% of the crop was planted very late suggesting reproduction will not occur until the second half of May
 - Limited crop moisture will surely impact production this year
- Argentina's rain this week has been locally heavy and will continue into Saturday resulting in some areas of flooding

Terry Reilly Grain Research

Futures International | One Lincoln Centre, Suite 1450

18 W 140 Butterfield Rd. | Oakbrook Terrace, Il. 60181

W: 312.604.1366 | treilly@futures-int.com

- Local flooding has already occurred in a part of central Santa Fe reporting 2.00 to more than 6.00 inches of rain overnight
- Too much rain could harm crop conditions and delay harvesting, but it is early enough in the season for conditions to improve enough without harming crops
 - Drier weather is needed over an extended period of time, though, to ensure crops do not suffer from too much moisture
- Central U.S. temperatures will fall notably below average in the coming week to ten days with April 13-19 coldest in the Plains and western Midwest and April 16-20 coldest in the eastern Midwest
 - Frost and freezes will impact many areas in the central and northern Plains as well as the heart of the Midwest, although the heart of the Midwest will not see the coldest weather for at least a week
 - No permanent damage to wheat will occur in the Plains or Midwest
 - Extreme lows in hard red winter wheat areas will slip to the middle and upper 20s Saturday and again next week
- Eastern Canada Prairies and a part of northern North Dakota and northwestern Minnesota will get some snow and rain late this weekend into early next week to help improve soil moisture for planting later this month
- Southwestern Canada's Prairies and the northwestern U.S. Plains will remain drought ridden for the next ten days, despite a few light showers
- U.S. Pacific Northwest needs moisture too with central Washington through the heart of Oregon still much too dry for unirrigated winter crops
- Additional rain in U.S. Delta this weekend will further delay field work, but drier weather at times in the following week will help get fieldwork back under way
- West Texas may get some rain next week to briefly moisten the topsoil, but much more rain will still be needed to induce the best planting conditions in May and early June
- South Texas drought continues and very little rain of significance is expected for a while, although a few showers will be possible periodically
- U.S. southeastern states will continue to see a good mix of rain and sunshine over the next couple of weeks
- Recent warm and dry weather in the U.S. eastern Midwest has accelerated net drying in the topsoil, but conditions are still very good for early season planting and germination
 - Fieldwork may be slowed with the prospects of colder weather coming after April 15
- California and the southwestern desert region will remain dry and in need of significant moisture, but irrigation is sufficient to carry on most agricultural needs
 - No relief is expected in the coming week, but some showers may occur in a part of the region After April 18
- At 0900 GMT, Tropical Cyclone Seroja was located 306 miles west northwest of Learmonth, Western Australia at 19.95 south, 109.2 east moving southwesterly at 11 mph and producing maximum sustained wind speeds of 63 mph
 - The storm will move inland near Geraldton, Western Australia Sunday producing heavy rain and strong wind speeds along the coast
 - Beneficial moisture will fall in wheat, barley and canola production areas of Western Australia where planting will begin late this month
- Most interior crop areas of Australia will not be bothered by significant rain this week
 - Rain in Western Australia late this weekend and early next week will be dependent upon the tropical cyclone noted above
 - Good drying conditions are likely in key summer grain, oilseed and cotton areas in Eastern Australia this week favoring summer crop maturation and good harvest progress.
- Frost and freezes in Europe are not permanently harming winter wheat, barley, rye or rapeseed, although new growth is being burned back

Terry Reilly Grain Research

Futures International | One Lincoln Centre, Suite 1450

18 W 140 Butterfield Rd. | Oakbrook Terrace, IL 60181

W: 312.604.1366 | treilly@futures-int.com

- Warming is needed to stimulate new winter crop development and spring planting
- Rain and snow across the continent will increase soil moisture for use by crops during the warmer days of late April and May
- Western Europe will receive some needed rain this weekend
 - The precipitation will be erratic and somewhat light leaving need for more moisture
 - Next week trends drier once again and some warming is expected
- CIS grain and oilseed areas will continue plenty moist except in Russia's Southern Region and Kazakhstan where there is need for more moisture this spring and summer
 - Winter crops are still dormant or semi-dormant, although a little greening may be occurring in the far south
 - Significant warming is expected this weekend and early next week that will more significantly melt snow and warm soil temperatures
 - Some improved planting conditions may evolve in parts of Ukraine and Russia's Southern Region and winter crops will break dormancy a little more significantly because of the warmth
- Mainland areas of Southeast Asia will experience a net boost in precipitation over the next few weeks that will improve corn planting conditions and maintain an improving trend in sugarcane, rice and coffee production areas
 - Some beneficial rain fell across parts of this region recently, but southern areas are still dry
- Philippines weather is good for most crops, but a boost in rainfall would be welcome
- Indonesia and Malaysia crop weather is expected to be mostly good for the next ten days to two weeks with most areas getting rain
 - Flooding in Timor and Flores is abating after serious crop and property damage occurred during the weekend from a developing tropical cyclone
- India weather will continue good for this time of year with restricted rainfall and warm temperatures supporting winter crop maturation and harvest progress
 - Rain may fall heavily in Bangladesh and neighboring areas of India briefly next week
- China weather remains mostly very good, although portions of the Yangtze River Basin are too wet and need to dry down
 - Northern crop areas in China are favorably moist and poised to support aggressive winter and spring crop development this year once additional warming takes place
- North Africa will experience a favorable mix of weather over the next ten days, although resulting rainfall is not likely to be very great
 - All of the moisture will be welcome, but resulting amounts may be a little erratic and light leaving need for more moisture
 - Northwestern Algeria and southwestern Morocco need rain
 - Temperatures will be near to above average
- West-central Africa coffee and cocoa weather has been very good recently and that is not likely to change much for a while; some rice and sugarcane has benefited from the pattern as well
 - Rainfall will be a little lighter and less frequent than usual over for a while longer, but improved rainfall should occur in the April 16-22 period
 - Temperatures have been and will continue to be very warm keeping evaporation rates very strong until greater rain evolves
- East-central Africa rainfall has been erratic recently and a boost in precipitation should come to Ethiopia this month while Tanzania slowly begins to dry down
- South Africa weather will continue favorably for early maturing summer crops and the development of late season crops
 - Net drying is expected for a while which will support faster crop maturation and will eventually support early season harvest progress

- Temperatures will be warmer than usual and that will dry out the soil relatively quickly
- New Zealand weather has been drier than usual and precipitation will slowly improve during the next week to ten days in both North Island and western parts of South Island
 - Temperatures will be seasonable
- Southeastern Canada will see below average precipitation and warmer than usual temperatures over the next ten days
- Mexico precipitation will continue limited to a few eastern and far southern locations during the next week to ten days
 - Rain is needed in many areas
 - Drought is prevailing across most of the nation
- Southern Oscillation Index this morning was +0.93 and the index will move in a narrow range through next week with slight rise in the index.

Corn

- May corn traded to a new contract high today (rolling contracts near 8-year high) and selling into the closed pulled the contract 2.50 cents lower. For the week it was up 3.1%. CBOT corn was higher before the report on follow through buying. Selling commenced after the release of the report and again near the close. December finished up 1.75 cents from unwinding of bull spreads. News was very quiet.

Some traders speculate the recent rally was already worked in ahead of what people expect as a bullish report. One key change in today's USDA report was USDA taking exports 75 million bushels higher, less than what the trade was looking for.

- US corn stocks of 1.352 billion bushels are see tightest since the 2013-14 season.
- Today was day two of the "Goldman Roll."
- Funds on Friday bought an estimated net 4,000 corn contracts.
- China in their CASDE report raised their corn import forecast for 2020-21 to 22 million tons from 10 million tons previous month. This was warranted and already penciled in balance sheets.

Export developments.

- None reported

- CBOT soybeans closed lower after USDA upward revised the SA soybean crop and left US ending stocks unchanged (see text page one and tables after the text). USDA estimated global soybean stocks at 86.9 million tons, above an average trade guess of 83.5 million.
- May soybeans ended 12.25 cents lower and for the week were up 0.1%. May soybean meal finished \$5.60 lower and for the week was down 2.2%. May soybean oil was 53 points higher and for the week was up 1.4%.
- Funds on Friday sold an estimated net 6,000 soybean contracts, sold 4,000 soybean meal and sold an estimated 3,000 soybean oil.
- Safras & Mercado estimates Brazil soybean producers sold 14 percent of their upcoming 2022 crop. The crop will not be planted until later this year. For this year, a separate group, Datagro, estimates Brazil farmers sold 66.6% of their soybean crop through April 2, above a 57.1% five-year average.
- China cash crush margins on our analysis were 179 (161 previous) vs. 144 cents late last week and compares to 214 cents year earlier.
- APK-Inform reported Ukrainian rapeseed export prices increased by \$10-15 a ton over the past week to \$525 to \$533 per ton for delivery in July-August.
- A Reuters poll for Malaysia's palm oil inventories shows March stocks expected to rise 1.3% from February to 1.32 million tons, production to slightly decline, and exports to be up 25% to 1.12 million tons. The Malaysian Palm Oil Board will release the official data on April 12.

Wheat

- Wheat prices firmed on Friday on EU, US and Canada weather concerns and technical buying, led by high protein contracts. USDA trimmed global wheat stocks by 5.7 million tons in large part to a large increase in China consumption. US wheat stocks were taken up 16 million bushels.
- May Chicago wheat traded back above its 100-day MA and during the session was able to break above its 20-day but gains earlier were trimmed after corn futures sold off post USDA report. The Chicago May contract settled at \$6.3875, below its 20-day but above the 100-day.
- Chicago wheat basis May was up 10 cents (4.5% higher for the week), KC May up 10 cents (3.8% higher for the week) and May MN up 13.75 cents (up 9.2% for the week).
- Funds on Friday bought and estimated net 8,000 CBOT SRW wheat contracts.
- May milling wheat settled up 1.00 euro, or 0.5%, at 212.75 euros (\$253.09) a ton.
- EU soft wheat conditions were unchanged from the previous week at 87% for the week ending April 5. Winter barley was up 1 point to 85 percent.
- SovEcon pegged the Russian 2021 wheat crop at 80.7 million tons, 1.4 million tons higher than their previous estimate.

Export Developments.

- Japan in its weekly SGS import tender seeks 80,000 tons of feed wheat and 100,000 tons of barley for arrival by September 30.
- Jordan postponed their 120,000 ton import tender of animal feed barley from April 6 to April 13.
- Ethiopia seeks 30,000 tons of wheat on April 16.
- Ethiopia seeks 400,000 tons of optional origin milling wheat, on April 20, valid for 30 days. In January Ethiopia cancelled 600,000 tons of wheat from a November import tender because of contractual disagreements.

Rice/Other

- Iraq bought 60,000 tons of rice from Pakistan at \$595/ton c&f.
- South Korea's Agro-Fisheries & Food Trade Corp bought 46,229 tons of rice for up to 208,217 tons sought in late March, sourced from Thailand, Vietnam and China.
- Mauritius seeks 4,000 tons of optional origin long grain white rice on April 16 for delivery between June 1 and July 31.
- Bangladesh seeks 50,000 tons of rice on April 18.
- Syria seeks 39,400 tons of white rice on April 19. Origin and type might be White Chinese rice or Egyptian short grain rice.
- Ethiopia seeks 170,000 tons of parboiled rice on April 20.

Disclaimer

TO CLIENTS/PROSPECTS OF FUTURES INTERNATIONAL, SEE RISK DISCLOSURE BELOW:

THIS COMMUNICATION IS CONVEYED AS A SOLICITATION FOR ENTERING INTO A DERIVATIVES TRANSACTION.

Any trading recommendations and market or other information to Customer by Futures International (FI), although based upon information obtained from sources believed by FI to be reliable may not be accurate and may be changed without notice to customer. FI makes no guarantee as to the accuracy or completeness of any of the information or recommendations furnished to Customer. Customer understands that FI, its managers, employees and/or affiliates may have a position in commodity futures, options or other derivatives which may not be consistent with the recommendations furnished by FI to Customer.

The risk of trading futures and options and other derivatives involves a substantial risk of loss and is not suitable for all persons. In purchasing an option, the risk is limited to the premium paid, and all commissions and fees involved with the trade. When an option is shorted or written, the writer of the option has unlimited risk with respect to the option written. The use of options strategies such as a straddles and strangles involve multiple option positions and may substantially increase the amount of commissions and fees paid to execute the strategy. Option prices do not necessarily move in tandem with cash or futures prices. Each person must consider whether a particular trade, combination of trades or strategy is suitable for that person's financial means and objectives.

This material may include discussions of seasonal patterns, however, futures prices have already factored in the seasonal aspects of supply and demand, and seasonal patterns are no indication of future market trends. Finally, past performance is not indicative of future results.

This communication may contain links to third party websites which are not under the control of FI and FI is not responsible for their content. Products and services are offered only in jurisdictions where solicitation and sale are lawful, and in accordance with applicable laws and regulations in each such jurisdiction.
