TODAY'S HIGHLIGHTS

- Canada's Prairies and the northern U.S. Plains may see a boost in rainfall during the second week of the two week outlook
 - o Dry conditions will prevail in this first week of the outlook
 - Temperatures will trend very warm to hot early next week ahead of the rising potential for rain
- Frequent rain in a part of the central and southern Plains will be closely monitored for possible wet weather disease in wheat areas and if the rain prevails too long it could raise a quality issue for early maturing crops in the south
- Lower Midwest and northern Delta precipitation will also become substantial next week slowing fieldwork and inducing local flooding possibly
- Net drying is expected in the southeastern U.S. for a while
- U.S. Pacific Northwest dryness will continue a concern in unirrigated areas of the region
- Brazil's Safrinha crop areas will receive no meaningful rainfall for the next week to 8 or 9 days and then a few showers may evolve lightly
 - Rain after May 23 in Brazil's corn country is too intense and may be too widespread on the GFS model runs, but some showers are expected
- The European continent will continue wet over the next ten days
- Russia's New Lands are continuing to dry out and this will become a market interest soon as the regions turns warmer than usual and becomes a little too dry

- The area includes the southern Ural Mountains region, northern Kazakhstan and neighboring areas to the north in Russia's southeastern New Lands and perhaps also impacting eastern portions of the lower Volga River Basin
 - This region is not too dry today and is expected to see aggressive spring planting and early crop development until the soil becomes too dry
- A developing tropical cyclone off the lower west coast of India will be closely monitored as it quickly intensifies and moves up the west coast of India
 - Landfall is advertised near the Gujarat/Pakistan border early to mid-week next week
 - The storm could have quite an impact if it is as intense as advertised and follows the advertised path
- Mainland areas of Southeast Asia and Luzon Island, Philippines still need greater rain
- West Africa will receive lighter than usual rainfall for a while in the coming week
- Australia will be dry over the next ten days
- Argentina weather will remain favorable for its harvest
- China will continue too wet in the Yangtze River Basin
- Hebei, Shandong and Liaoning, China will dry down over the next ten days, but should not become threateningly dry

USDA Export Sales

US export sales for the soybean complex were poor, corn at the high end of expectations and wheat within expectations. The net reduction in old-crop corn were a marketing year low and included reductions primarily for China of 334,300 tons and unknown destinations of 192,600 MT. Corn 2021-22 net sales of 2,083,600 MT were primarily for China (1,360,000 MT), unknown destinations (254,000 MT), and Mexico (219,500 MT). Sorghum sales were 71,100 tons and included China. Old crop soybean sales were a low 94,300 tons but it does not appear China cancelled any commitments. Shipments of meal were ok but soybean oil was only 2,100 tons. Pork sales slowed to 14,700 tons with China taking only 3,000 tons. All wheat sales of 30,300 tons old crop and 268,000 tons new crop were within expectations and included Mexico and unknown as the primary destinations for new-crop.

Corn

- CBOT July corn settled limit down at the 40-cent limit today while the synthetic corn market was near was over 6 cents below that at \$6.6875/bu during the closing minute. Follow-through selling and risk-off by fast money funds pressed the market lower all session.
- Traders ignored the flash sale on the 24hr window of China bought 680,000 tons of new-crop US corn.
- Traders should monitor the Miss. River barge traffic flow after the US Coast Guard closed a section of
 the river on Wednesday after finding a crack in a major roadway bridge. We heard rumors the river
 could be opened up on Sunday but cannot verify that as time of writing.

Updated 5/7/21

July is seen in a \$6.00 and \$7.75 range

December corn is seen in a \$4.75-\$7.00 range.

The US needs to see a massive crop to pull new-crop futures below \$4.00, which could happen for 2022 contracts if the export campaign for Q1 (SON) does not end up a record. Keep an eye on new-crop corn commitments this summer.

Soybeans

- CBOT soybeans fell on risk-off selling and long liquidation. The cracked bridge on I-40 over the Mississippi River also added weakness to the market and all barge traffic has been halted for the short-
- Funds were net sellers of 28,000 net soybean contracts and a net seller of 19,000 soymeal contracts, and a net seller of 6,000 net beanoil contracts.
- After getting some feedback, we are hearing US crush downtime during the month of April was much larger than what we had penciled in. We lowered our April crush estimate and SBO ending stocks to reflect this.

Wheat

 US wheat futures ended lower following corn and risk-off selling. Also weighing on the market was the firmer USD. Southern US Plains are expected to receive yield boosting rains which added to selling pressure today.

September Paris wheat fell 9.50 euro to \$216.00 following the global grains selloff.

The United States exports approximately one-quarter of the grain it produces. On average, this includes nearly 45 percent of U.S.-grown wheat, 50 percent of U.S.-grown soybeans, and 20 percent of the U.S.-grown corn. Approximately 55 percent of the U.S. export grain shipments departed through the U.S. Gulf region in 2019.

Any trading recommendations and market or other information to Customer by Futures International (FI), although based upon information obtained from sources believed by FI to be reliable may not be accurate and may be changed without notice to customer. FI makes no guarantee as to the accuracy or completeness of any of the information or recommendations furnished to Customer. Customer understands that FI, its managers, employees and/or affiliates may have a position in commodity futures, options or other derivatives which may not be consistent with the recommendations furnished by FI to Customer.

The risk of trading futures and options and other derivatives involves a substantial risk of loss and is not suitable for all persons. In purchasing an option, the risk is limited to the premium paid, and all commissions and fees involved with the trade. When an option is shorted or written, the writer of the option has unlimited risk with respect to the option written. The use of options strategies such as a straddles and strangles involve multiple option positions and may substantially increase the amount of commissions and fees paid to execute the strategy. Option prices do not necessarily move in tandem with cash or futures prices. Each person must consider whether a particular trade, combination of trades or strategy is suitable for that person's financial means and objectives.

This material may include discussions of seasonal patterns, however, futures prices have already factored in the seasonal aspects of supply and demand, and seasonal patterns are no indication of future market trends. Finally, past performance is not indicative of future results.
