Grain Market Comment

Wednesday, August 04, 2021

Good morning.

No major changes to the US weather forecast. It will remain dry across the WCB over the next few days. IA, WI, and northern IL have an opportunity for rain later this weekend into early next week, but some models look dry after that occurrence. There are no issues with the ECB.

Rebound in soybeans and wheat are limiting losses in corn (September around $5.50). StoneX in their first survey of the season pegged the US Corn yield/production at 176.9/14.945, and soybeans at 50.0/4.332. USDA is at 179.5 and 50.8. We are at 176.0 and 50.8.

WORLD WEATHER INC.

WORLD WEATHER HIGHLIGHTS FOR AUGUST 4, 2021

- No major changes occurred overnight.
- The primary theme for the U.S. is about the three weather disturbances that move through Iowa, Minnesota, Wisconsin and northwestern Illinois over the next week to ten days.
  - The rain may not be heavy, but its mere presence and frequency will help prevent an expansion of dryness into a larger part of the U.S. Corn and Soybean Belt.
- Status quo conditions are expected in Canada's Prairies and the northern U.S. Plains
- There will be some expansion of dryness into Nebraska, Kansas and from southern Missouri to southern Illinois.
- No changes were noted in South America, Europe, the CIS, China, India or Australia relative to Tuesday's forecasts and commentary.
  - Frequent rain in Europe from France into Belarus and far western Russia will keep some pressure on the quality of unharvested small grains
  - Southeastern Europe will remain too dry and quite warm resulting in rising moisture stress for unirrigated summer crops
  - Drying will continue from eastern parts of Russia’s Southern Region into Kazakhstan
  - China weather is improving resulting in receding flood water and some crop improvement
    - However, crop damage did occur last month because of extreme rainfall and flooding in Henan, Hebei, Shandong, Jiangsu, southeastern Anhui and northern Zhejiang

    - China flooding in the coming week will be associated with Tropical Storm Lupit as it impacts the southern coastal provinces
    - Australia still needs rain in Queensland while most other winter crops are favorably established
    - Dryness remains in Argentina, but with winter crops semi-dormant the impact is very low
    - Brazil weather will be seasonably dry for a while
        - Damaged crops will slowly recover in areas with favorable soil moisture, but concern remains for coffee and sugarcane areas where soil conditions are dry
- A new tropical cyclone is evolving in the far western Pacific Ocean that will impact a part of Honshu, Japan this weekend
- Tropical systems in the eastern Pacific Ocean will stay west of Mexico and be no threat to North America
- Tropical Atlantic weather is mostly quiet and will remain that way for a while
