Indonesia will now limit the amount of palm exports after announcing earlier this week that they were lifting the export ban. Rain fell across the Midwest over the weekend and more rain is seen this week bias eastern TX & OK, Delta, heart of the Midwest and Southeast. Grains were lower on Friday and soybean complex higher. Argentina increased its cap on corn exports. The USD was 30 points higher and WTI crude ended nearly 50 cents higher. USDA cattle on feed was slightly supportive for corn.

World Weather Inc.

WEATHER EVENTS AND FEATURES TO WATCH

- Frost and freeze conditions occurred in southern Brazil this morning with most of the hard freezes in Santa Catarina and parts of Rio Grande do Sul
 - Lighter freezes occurred in southern Parana mostly in wheat country where the impact was minimal.
 - o No Safrinha crop area was negatively impacted
- Frost was reported in a few Sul de Minas coffee production areas this morning, but the impact should have been minimal
 - One location north of Tres Pontas reported a near dawn temperature of -1 Celsius or 30 degrees
 Fahrenheit
 - Most lows were 2 to 6 Celsius or 35-43F
- Cool weather will continue in Brazil through the weekend, but temperatures should not be any cooler than
 they were today except in a couple of Parana locations where readings may be a degree or two lower
 Saturday
 - No freeze will occur in Safrinha corn areas Saturday, but there could be a few patches of frost in minor production areas.
- Argentina's second week outlook has potential for rain in wheat areas, but the latest model run of the GFS this morning minimized some of that potential once again
 - The Ooz GFS and Ooz European model runs had more moisture for the last days of May and first days of June
 - World Weather, Inc. believes some rain will fall, but it is questionable how generalized and beneficial it will be
 - Follow up moisture will be imperative
- No relief from dryness is expected in Mato Grosso or Goias Safrinha corn production areas during the next two weeks – which is normal for this time of year, but crop stress while grain filling is expected to continue threatening some of the late season yields
- West Texas rainfall Monday through Wednesday of next week may vary from 0.35 to 1.00 inch with local totals of 1.00 to 2.00 inches;
 - o The lighter amounts will occur in the west near the New Mexico border.
 - The precipitation will be welcome, but not uniform and mostly light leaving a big need for more moisture
 - The Rolling Plains will be much wetter than the high Plains
- Significant rain will fall in the Texas Blacklands during mid-week next week possibly resulting in some local flooding
 - The moisture will be good for developing corn, sorghum and cotton, although if the GFS mode is correct flooding could damage a few fields
 - The GFS model is likely overdoing some of the predicted rain
- U.S. Midwest rainfall will be greatest during the middle part of next week slowing or stalling fieldwork for a little while
 - A better mix of rain and sunshine should occur before and after that period of time supporting some fieldwork during the drier days
- Southeastern portions of the U.S will see some timely rainfall, to prevent dryness from festering into a problem during the next ten days
- U.S. Delta weather will be favorable for summer crops, although there will be enough rain to slow farming activity for a while next week

- U.S. northern and west-central Plains will experience frost and freezes this weekend with temperatures falling to the upper 20s and 30s Fahrenheit
 - Permanent crop damage is possible in a few early planted spring crop areas, but most of those early crops can handle the cold without a problem for no further advanced than they are
 - U.S. hard red winter wheat areas in western Nebraska, northwestern Kansas and northeastern
 Colorado will see frost and freezes Saturday and Sunday that may burn back some of the crop and could negatively impact production in a few of the more advanced counties
 - Northwestern Kansas reports 14% of the wheat headed as of last Sunday and low temperatures there may slip near or slightly below freezing along the Colorado and southwestern Nebraska border
- Snow is still expected to fall in eastern Colorado tonight with some significant accumulations in east-central parts of the state mostly near the mountains
- Cold in Canada's Prairies and the U.S. northwestern Plains should not seriously impact any crop this weekend
- U.S. spring wheat and Canada's eastern Prairies will see instability showers of rain and snow today and Saturday before dry weather finally settles in
 - Other showers of limited significance will occur next week, but the moisture will slow or completely disrupt the region's drying trend
 - World Weather, Inc. believes net drying will occur for about ten days in the eastern Canada Prairies, northern North Dakota and northern Minnesota, despite the showers suggested and "some" farming activity will eventually take place
 - Returning stormy weather in the last days of May or early days of June will impact planting once again
- Drought in the southwestern Canada Prairies will prevail over the coming week, but there will be "some" potential for rain in the last days of May and first days of June
 - O Light rain this week has temporarily moistened the topsoil for crop support, but dryness deep in the ground remains a big concern and significant rain must fall soon
- Ontario and Quebec weather will be mostly well mixed for spring and summer crop planting and winter crop development
- U.S. Pacific Northwest crops need greater precipitation to improve dryland crop development potentials
- Northern France, Germany and Poland are poised to receive rain periodically in the coming ten days
 - The moisture will help ease long term dryness, but other areas in Europe will not likely get enough rain to counter evaporation and net drying may continue
 - Crop moisture stress has already been rising across the continent and there is a drier bias for June in western areas similar to that which has been occurring recently
- Russia, Ukraine and northern Kazakhstan are expecting waves of light precipitation during the next ten days supporting spring fieldwork and crop development
 - Ukraine could run a little drier than usual in June and should be closely monitored, but the outlook currently is not bad for the nation
- Eastern China dryness in the North China Plain will continue for the next ten days, but there will be some shower activity and that will translate into a better environment for a few crops
 - The situation is not critical today, but another ten days of drying for some areas might lead to greater stress for unirrigated spring and summer crop
 - o Most of the winter crop is irrigated, but any dryland crop might run a risk of lower production
- Southern China will trend much wetter next week and into the early days of June resulting in some potential for additional flooding
 - Guangxi, Guangdong, Fujian and a few bordering areas to the north will be vulnerable to flooding eventually, but drier biased conditions will occur through the weekend

Terry Reilly Grain Research

- Xinjiang, China rainfall will be greatest in the mountains where a boost in water supply for irrigation is expected
 - Planting of cotton and corn as well as other crops is well under way and the outlook is favorable for most irrigated areas
- Southern India, southern Myanmar, other portions of mainland Southeast Asia and the northwestern
 Philippines will receive frequent rain this weekend through all of next week resulting in a rising potential for
 flooding.
 - o This precipitation is associated with a strong southwest monsoon flow
 - The lower coast of Myanmar will receive 10-20 inches of rain over the next ten days beginning this weekend
- Thailand may not be included in the wetter weather that other Southeast Asia nations experience for a while
- A tropical cyclone "may" evolve in South China Sea next week and could bring a risk of heavy rain, flooding and windy conditions to portions of Taiwan and indirectly to Luzon Island, Philippines
 - o The storm forms around mid-week and may threaten Taiwan at the end of the week
- Australia precipitation will be restricted through the weekend allowing autumn planting of wheat, barley and canola to advance along with the harvest of cotton and sorghum
 - A wetter second week of the forecast will slow fieldwork, but improve winter crop emergence and establishment potentials
- Rain in South Africa over the next few days will disrupt fieldwork, but the moisture will be ideal for wheat, barley and canola planting and establishment
 - o Drier weather will return next week favoring fieldwork once again
- West-central Africa rainfall during the next ten days will be favorable for coffee, cocoa, sugarcane, rice and cotton
 - There is need for greater rainfall farther north in cotton areas where recent rain has been a little restrictive at times
- East-central Africa rainfall will be most significant in southwestern Ethiopia, southwestern Kenya and Uganda during the next ten days while Tanzania begins to dry down seasonably
- North Africa weather will be mostly dry and warm for wheat and barley maturation and harvest progress
- Turkey will be the only Middle East nation getting rainfall during the next week to ten days
 - A boost in rain is needed in many areas, but Syria, Jordan and Iraq have been and will continue driest hurting winter grain production and raising some worry over irrigated cotton and rice development
- Mexico rainfall is expected to increase in the east next week as pre-monsoonal moisture builds up
- Central America will see periodic rain in the coming ten days with some of it to become heavy this weekend and next week from Costa Rica into Panama.
- Today's Southern Oscillation Index was +19.18 and it will remain near its peak intensity for a little while longer, but there is strong evidence for weakening soon
- New Zealand weather will trend drier for a while

Macros

China's Beijing reported 94 new local covid cases on Sunday.

Corn

- July corn ended Friday 4.50 cents lower and for the week was down 2 percent. US corn planting
 pressure and uncertainty over US corn exports for second half 2022 weighed on prices. Technical selling
 was noted.
- Argentina is going to raise export availability of corn by 5 million tons to 35 million tons that could cut into US exports.
- Brazil saw mild frost events last week, easing trade concerns over the late planted Brazil second corn crop currently in the pollination stage.
- Kenya will allow duty free corn imports of 540,000 tons.
- Baltic Dry Index increased 1.7% or 55 points on Friday to 3,344 points, up 7.7% for the week. It's up six consecutive days.
- USDA Cattle on Feed was seen slightly supportive for corn feed demand and bearish for cattle based on higher than expected May 1 cattle on feed.

Updated 5/12/22

July corn is seen in a \$7.50 and \$8.75 range December corn is seen in a wide \$5.50-\$8.50 range

Soybeans

 The soybean complex ended the week on a higher note on talk of China buying US soybeans and Indonesia announcing requirements to fulfill the domestic market for palm oil, leading some to think exports will again be curtailed. Vegetable oil traders took note and bought soybean oil. Meal ended higher and soybeans rallied led by the nearby contracts.

Terry Reilly Grain Research

Futures International | One Lincoln Centre, Suite 1450 18 W 140 Butterfield Rd. | Oakbrook Terrace, II. 60181

W: 312.604.1366 | treilly@futures-int.com

- Indonesia will start exporting palm oil on May 23, but don't expect a surge in shipments. According to
 AgriCensus, Indonesia will reinstate the Domestic Market Obligation (DMO) and Domestic Price
 Obligation (DPO) scheme to ensure continued supply of domestic cooking oil. This was introduced
 earlier this year and dropped March 17. Eight million tons of cooking oil will be set aside for the
 domestic market and another 2 million tons for reserves.
- July Board soybean crush settled 8.50 cents higher at \$1.2850, but well off its April 29th high of \$2.15.
- The USD was stronger on Friday that could have limited gains in soybeans.
- SGS: Malaysian 1-20 palm exports 838,692 tons versus 632,588 tons same period month earlier.
- Malaysia's June crude export duty will remain at 8 percent.
- Attended FastMarkets biofuel conference last week. So many uncertainties for the expansion of renewable fuel was largely talked about. Uncharted territory is what I would describe it. The general consensus was renewable fuel production will expand, but how we get there over the next few years remains challenging. For example, the renewable diesel price is currently high, and a hard sell for current trucking companies. And will the government cut mandates to ease prices for food end users? Stay tuned. Very impressed over the amount of oil companies breaking into this space.

Export Developments

- China sold about 34 percent out of the 500,000 tons of soybeans offered from reserves on May 20.
- China plans to offer to sell another 500,000 tons of soybeans from reserves on May 27.

Updated 5/17/22

Soybeans - July \$15.50-\$18.00

Soybeans – November is seen in a wide \$12.75-\$16.50 range

Soybean meal – July \$350-\$450

Soybean oil – July 78-86

Wheat

• CBOT wheat fell sharply lower on Friday, for the third day in a row, on talk of improving global grain flows, higher USD, and improving US weather outlook. Technical selling was a key feature over the past

Terry Reilly Grain Research

Futures International | One Lincoln Centre, Suite 1450 18 W 140 Butterfield Rd. | Oakbrook Terrace, II. 60181

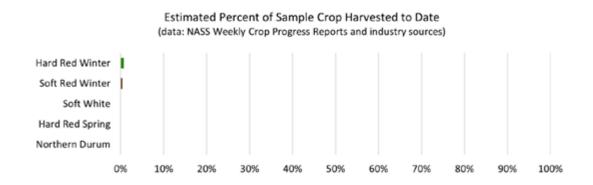

W: 312.604.1366 | treilly@futures-int.com

few business sessions, and we now estimate the funds net short (by a small amount) as of the end of Friday.

- India is studying requests from wheat traders to allow for more exports.
- The White House is looking into increasing grain shipment aid for countries in need of food commodities.
- The French wheat crop was rated 73 percent G/E versus 82% previous week and 89% two weeks ago.
- The Wheat Quality Council 2022 Hard Red Winter Wheat Tour on Thursday reported the KS yield at 39.7 bushels per acre, down from 58.1 bushels in 2021 and compares to a five-year average of 47.4 bushels per acre. This was the lowest yield since 2018. Production was estimated at 261 million bushels, below USDA's 271 May estimate. We were looking for a yield of 38.0 bushels and 262.2 million bushel production.
- CBIT wheat abandonment and OTM exercise: 157 June 1170 puts were abandoned, and 500 June 1170 calls were exercised.
 - https://www.cmegroup.com/delivery_reports/OptionExceptionSummaryReport_OPINS_CME_7.pdf
- September Paris wheat closed down 0.25 euro at 420.75 euros a ton.
- Again, Paris wheat option activity was large at the end of the week, with 33,857 lots trading hands.
- Egypt's local wheat procurement hit 2.5 million tons so far for this year's harvest, a signal imports are not immediately needed over the short term.

May 20, 2022

The 2022 U.S. wheat harvest season has officially begun. The HRW crop in Texas is 7% harvested with test cutting in Oklahoma, while 4% of Alabama's SRW harvest is complete. Samples of HRW and SRW will begin arriving in the coming weeks; initial grade and crop quality data should be available mid-June.

Export Developments.

- Bangladesh seeks 50,000 tons of wheat on May 23 for shipment within 40 days of contract signing.
- Jordan issued a new import tender for 120,000 tons of wheat set to close May 24 for Aug/Sep shipment.
- Pakistan seeks 500,000 tons of wheat on May 25. Bulk shipment is sought to Pakistan in June to July 2022.
- Jordan seeks on 120,000 tons of barley on May 26 for Aug/Sep shipment.
- Bangladesh seeks 50,000 tons of wheat on May 29 for shipment within 40 days.

Disclaimer

TO CLIENTS/PROSPECTS OF FUTURES INTERNATIONAL, SEE RISK DISCLOSURE BELOW:

THIS COMMUNICATION IS CONVEYED AS A SOLICITATION FOR ENTERING INTO A DERIVATIVES TRANSACTION.

Any trading recommendations and market or other information to Customer by Futures International (FI), although based upon information obtained from sources believed by FI to be reliable may not be accurate and may be changed without notice to customer. FI makes no guarantee as to the accuracy or completeness of any of the information or recommendations furnished to Customer. Customer understands that FI, its managers, employees and/or affiliates may have a position in commodity futures, options or other derivatives which may not be consistent with the recommendations furnished by FI to Customer.

The risk of trading futures and options and other derivatives involves a substantial risk of loss and is not suitable for all persons. In purchasing an option, the risk is limited to the premium paid, and all commissions and fees involved with the trade. When an option is shorted or written, the writer of the option has unlimited risk with respect to the option written. The use of options strategies such as a straddles and strangles involve multiple option positions and may substantially increase the amount of commissions and fees paid to execute the strategy. Option prices do not necessarily move in tandem with cash or futures prices. Each person must consider whether a particular trade, combination of trades or strategy is suitable for that person's financial means and objectives.

This material may include discussions of seasonal patterns, however, futures prices have already factored in the seasonal aspects of supply and demand, and seasonal patterns are no indication of future market trends. Finally, past performance is not indicative of future results.

This communication may contain links to third party websites which are not under the control of FI and FI is not responsible for their content. Products and services are offered only in jurisdictions where solicitation and sale are lawful, and in accordance with applicable laws and regulations in each such jurisdiction.
