

Good morning.

*China approved Brazil corn imports and with US corn plantings advancing nicely, that sent corn futures sharply lower. Wheat traded two-sided, ending lower in part to improving US weather and slowing global trade demand. Old crop soybeans rallied in part to strength in meal and Chinese demand. New crop was under pressure with 50% of the US crop planted as off Sunday. Soybean oil traded two-sided, falling during the day session from weakness in corn and to some extent WTI crude oil. Argentina soybean oil basis rallied after India dropped their import duties on crude soybean oil and crude sunflower oil. World Weather Inc.: The big rain event in the southern Plains will shift to the Midwest, Delta and Tennessee River Basin today and Wednesday before shifting farther to the east Thursday.*

## World Weather Inc.

### WEATHER EVENTS AND FEATURES TO WATCH

- Rain fell in parts of West Texas, the Texas Panhandle and Oklahoma overnight
  - Rainfall of 1.00 to 2.50 inches occurred in northwestern parts of West Texas crop country
  - Heavier rain fell in northern Oklahoma with some amounts over 4.00 inches
    - The greatest rainfall and strong thunderstorms likely produced some hail and may have damaged a few wheat and early summer crops
- The big rain event in the southern Plains will shift to the Midwest, Delta and Tennessee River Basin today and Wednesday before shifting farther to the east Thursday
  - Field working delays are expected, but they will not last long in most areas
- A transient ridge of high pressure is expected to move across the Plains this weekend and into next week resulting in significant heat and dryness over several days
  - This will negate some of the rain that has just fallen in West Texas, but crops will benefit from the moisture before the heat and dryness comes along
    - Extreme high temperatures in the southwestern Plains will reach above 100 with a few highs over 110 possible during the peak of the expected heatwave
  - Some of the warm weather will shift to the Midwest and Delta next week, but it will not be as oppressively hot as it will be in the southern Plains.
- Precipitation will continue to fall across the northern U.S. Plains and a part of Canada's Prairies this week, but the precipitation may not be nearly as great as that of last week allowing some areas to experience a little drying
  - However, the drying time will be short enough to raise concern over planting progress in the wettest areas
- Southwestern parts of Canada's Prairies are still expecting below average precipitation in the next ten days resulting in some continued concern over limited rainfall.
  - The precipitation is expected in June and especially July and August making the next few weeks extremely important for timely precipitation even if it is lighter than usual just to keep the crop viable until greater rain evolves
- Portions of U.S. hard red winter wheat production areas received rain overnight
  - Southern Kansas, Oklahoma and the Texas Panhandle were most impacted, but some of the moisture came a little late for wheat production changes of significance
    - Much lighter rain occurred in other parts of the region, although a few more showers are possible today before drier weather resumes and the temperatures heat up again
  - The moisture will be great for crops in Kansas, Colorado and Nebraska, but a little too late to change production in the southern Plains (Oklahoma/Texas)
- NOAA's ENSO forecast model has been suggesting a strong weakening trend in La Nina for the next few weeks
  - The model suggests dissipation is possible in July
  - The latest ocean data certainly supports a marginal La Nina event (at best) for the summer months
  - This change will allow the negative phase of Pacific Decadal Oscillation (PDO) to have greater influence on North America weather and that should place a trough of low pressure along the Pacific Coast and a ridge in the middle of nation
    - This change in the upper air wind flow pattern cannot occur until the jet stream slows down which may be a few weeks away
- South Texas, the Texas Coastal Bend and Blacklands will also be impacted by rain Today into Wednesday morning with amounts of 0.50 to 1.50 inches resulting

Futures International | One Lincoln Centre, Suite 1450

18 W 140 Butterfield Rd. | Oakbrook Terrace, IL 60181

W: 312.604.1366 | [treilly@futures-int.com](mailto:treilly@futures-int.com)

- Local rain totals in the Blacklands will vary from 1.50 to more than 3.00 inches
  - The moisture will be great for improving topsoil moisture and crop conditions, although local flooding could cause some short term concerns
- U.S. Delta and southeastern states will receive significant rain in this coming week with sufficient amounts to bolster soil moisture and further minimize the potential for drought
- U.S. Midwest weather will be sufficiently moist in the coming week to support earlier planted summer crops.
  - Today through Thursday of this week will be wettest with favorable drying conditions Monday and late this week through early next week
    - Fieldwork will advance most significantly this weekend into next week
  - Temporary ridge building (aloft) next week will also allow temperatures to turn much warmer accelerating drying rates and allowing fieldwork to advance fastest at that time
    - The warmth will stimulate crop development
- The bottom line to the U.S. Midwest weather for the next two weeks will be mostly good with a favorable mix of rain and sunshine supporting fieldwork and crop development. Fieldwork will advance around the precipitation and early season crop development should advance favorably.
- U.S. Pacific Northwest crops need greater precipitation to improve dryland crop development potentials
- Quebec and Ontario weather during the weekend was mixed with some sunshine, some rain and some warm weather
  - The favorable environment will continue over the next two weeks allowing fieldwork of all types to advance along with some aggressive crop development
- Argentina rainfall is expected later this week in northeastern parts of the nation missing the drier wheat areas in the southwest.
  - Greater amounts will be needed to more seriously bolster soil moisture for winter crop planting, germination and emergence
  - Cooler temperatures will be returning to Argentina late this week resulting in slower drying rates, but no crop damaging temperatures are expected
- *Brazil weather will turn wetter in the southwest and far southern parts of the nation late this week into the weekend*
  - The moisture will be good for future winter crop development and for late filling and maturing Safrinha crops
  - Ongoing dryness in Mato Grosso and Goias will continue threat late season corn development
- Brazil temperatures will be warmer than usual in the north during this first week of the outlook and then cooler air will come into the far south next week while the northeast is warmest
- Brazil's bottom line remains good for early maturing Safrinha crops and for coffee, citrus and sugarcane as they mature and are harvested. Rain would not likely benefit many crops other than late maturing summer crops, some citrus and sugarcane.
- Europe rainfall will be scattered throughout the continent during the next two weeks; however, its intensity and daily coverage will vary greatly
  - Moisture totals will be greatest in the Alps and eastern parts of the continent
  - Coverage of rain will be greatest from northern Poland and eastern Germany into the Baltic States and Belarus as well as from central Ukraine into Romania and the southwestern Balkan Countries
  - Net drying is expected in most other areas
  - France will be one of the driest nations with crop stress expected to become more significant threatening winter wheat and rapeseed
  - Temperatures will be seasonable
- Frequent rain is still expected in western and northern Russia over the next ten days with some rain also falling in the Baltic States, Belarus and central and western Ukraine

---

**Terry Reilly** Grain Research

Futures International | One Lincoln Centre, Suite 1450

18 W 140 Butterfield Rd. | Oakbrook Terrace, IL 60181

W: 312.604.1366 | [treilly@futures-int.com](mailto:treilly@futures-int.com)

- Western and southern portions of Russia's Southern Region will also be impacted by rain periodically with areas near Georgia wettest
  - Temperatures will be cooler than usual western Russia this week and a little more seasonable next week
  - Temperatures will be warmer than usual in the eastern New Lands this week and throughout much of the New Lands next week
- The bottom line remains good for many winter crop areas, but spring planting progress is not likely to advance very well without some greater drying between weather events. This is especially true for western Russia
- Little to no rain will fall in the North China Plain for the next nine to ten days
  - The region has already been drying out and this pattern will continue for a while longer
  - Temperatures will be seasonable
  - Rain is possible
  - There is "some" potential for rain in the first days of June, but confidence is low
- Other areas in eastern China will see a mix of rain and sunshine during the next two weeks.
- Xinjiang, China weather is expected to be drier biased during much of the coming two weeks in crop areas with some rain falling in and near the mountains periodically
  - Planting progress in corn and cotton areas will advance normally
- India will receive pre-monsoonal showers and thunderstorms over the next week to ten days resulting in some moistening in the topsoil, but greater rain will be needed
  - Monsoonal precipitation will begin a little earlier than usual, but the precipitation will be mostly confined to the lower west coast and in the far Eastern States
    - The monsoonal rainfall is advertised to be lighter than that suggested for the region last week
  - Temperatures will be seasonable
- South Africa is trending drier
  - The recent rain was great for bolstering topsoil moisture in favor of winter grain and oilseed planting, although Western Cape was largely missed by the greater rain
  - Both the harvest of summer crops and the planting of winter grains will advance well in the drier weather this week
  - Temperatures will be near to above normal this week
- Australia will experience a light mix of rain and sunshine over the next two weeks. Soil conditions will slowly become wetter favoring autumn planting of wheat, barley and canola, but greater rainfall will be needed outside of Victoria, southern New South Wales and southeastern South Australia where the greatest rain is expected. Far southwestern parts of South Australia will also be favorably moist
  - Temperatures will be seasonably warm (near to above normal)
- All of Southeast Asia will get rain at one time or another over the next couple of weeks.
  - The precipitation will be good for most crop needs; however, it will be heavy along the Myanmar lower coast and in parts of both Laos and Vietnam into Cambodia
  - Northwestern Luzon Island, Philippines and Taiwan will also be wet
- Thailand may not be included in the wetter weather that other Southeast Asia nations experience for a while
- West-central Africa rainfall during the next ten days will be favorable for coffee, cocoa, sugarcane, rice and cotton
- East-central Africa rainfall will be most significant in Ethiopia, southwestern Kenya and Uganda during the next ten days while Tanzania's Pare region dries down seasonably
- North Africa rainfall will be limited in the next two weeks, although some rain is expected very lightly

W: 312.604.1366 | [treilly@futures-int.com](mailto:treilly@futures-int.com)

- Most wheat and barley in the region is maturing and being harvested keeping the need for rain very low
    - Most of the rain expected will be limited and should not adversely impact crop conditions or field progress
- Northern and some eastern Turkey crop areas will be the only ones in the Middle East nation to get significant rainfall during the next week to ten days
  - A boost in rain is needed in many areas, but Syria, Jordan and Iraq have been and will continue driest
    - These areas may experience a decline in wheat, rice and cotton production this year – at least in unirrigated areas
- Mexico rainfall is expected to slowly increase in western and southern parts of the nation during the next ten days
  - The moisture will be welcome and should be a part of the developing monsoon season
- Central America will see periodic rain in the coming ten days with some of it to become heavy this weekend and next week from Costa Rica into Panama.
- Today's Southern Oscillation Index was +19.18 and it will steadily decline over the next few weeks
- New Zealand rainfall will be limited this week, but should increase next week

## Bloomberg Ag Calendar

Tuesday, May 24:

- Grain & Maritime Days conference in Istanbul, May 24-25
- Russian Meat & Feed Industry conference in Moscow
- EU weekly grain, oilseed import and export data
- Brazil's Unica may release cane crush and sugar output data during the week (tentative)

Wednesday, May 25:

- EIA weekly U.S. ethanol inventories, production, 10:30am
- Malaysia's May 1-25 palm oil export data
- U.S. poultry slaughter, 3pm
- HOLIDAY: Argentina

Thursday, May 26:

- USDA weekly net-export sales for corn, soybeans, wheat, cotton, pork and beef, 8:30am
- USDA releases World Sugar Markets and Trade outlook
- Russian grain forum starts in Sochi
- HOLIDAY: France, Germany, Indonesia

Friday, May 27:

- ICE Futures Europe weekly commitments of traders report
- CFTC commitments of traders weekly report on positions for various U.S. futures and options, 3:30pm
- FranceAgriMer weekly update on crop conditions

## Corn

- Six week low was established for nearby corn futures. Corn was lower on US export uncertainty for last half 2022 and rapid US planting progress (72% vs. 68% trade poll). Funds sold an estimated net 15,000 corn contracts.
- Argentina raised their corn export cap and now Brazil has some leverage. China signed an agreement with Brazil to import corn. They may soon agree to import soybean meal. Talks have been going on for years. Brazil corn is about \$25/ton cheaper than US corn, according to a Bloomberg story. SA corn exports to China will make up for some of the loss in Ukraine exports, but not all of it.
- We heard China bought Brazil corn for September/October shipment. Trade was talking up to 400,000 tons.
- Our 2021-22 US corn export projection stands unchanged at 2.550 billion bushels (USDA 2.500), but we cut new crop exports by 50 million to 2.450 billion (USDA @ 2.400).
- Anec: Brazil corn exports for May seen at 1.243 million tons, down from 1.264 previous.
- APK-Inform noted Ukraine exported 28,000 tons of grain by trucks so far in May. That included 26,300 tons of corn.
- A Bloomberg poll looks for weekly US ethanol production to be up 8,000 barrels to 999 thousand (991-1014 range) from the previous week and stocks up 45,000 barrels to 23.836 million.
- USDA could possibly issue their initial US corn crop condition next week. Corn emerged needs to be around 50 percent for conditions to be collected and as of Sunday corn was at 39 percent. We are eying 70 percent good/excellent for initial 2022 ratings, same as the 5-year average and down from 76 year ago.

## Corn Emerged - Selected States

[These 18 States planted 92% of the 2021 corn acreage]

**Updated 5/24/22**

**July corn is seen in a \$7.40 and \$8.40 range**

**December corn is seen in a wide \$5.50-\$8.00 range**

## Soybeans

- Soybeans traded two-sided, ending higher in the sport position and lower for November. Earlier Indonesian palm oil export uncertainty rallied palm oil futures, spilling into SBO, but that market collapsed during the morning trade from weakness in grains and WTI crude oil. WTI was mixed by 1:50 pm CT. India cut crude oil soybean oil and sunflower oil import duties, which was friendly for Argentina soybean oil premiums. India sourcing sunflower oil may be still a problem. Nearby CBOT soybean meal rebounded. News was light. US soybean plantings were 50% vs. a trade poll of 49%. With US producers tending to fields, soybean and corn basis increased across some key domestic locations.
- Funds bought an estimated net 2,000 soybeans, bought 3,000 meal and sold 1,000 soybean oil.
- India cut import taxes on crude soybean oil and crude sunflower oil to help cool domestic prices. They will allow imports of 2 million tons each of duty-free crude soybean oil and crude sunflower oil. Earlier the Agriculture Infrastructure and Development Cess (AIDC) said to Reuters the government could either cut or axe the 5%.
- China may soon agree to import soybean meal from Brazil. They are currently not an active importer of soybean meal.

- AgriCensus, referencing IMEA, reported Brazil's Mato Grosso crushed 3.5 million tons for the first four months of 2022, a 3% increase from same period year ago.
- Europe's slowing economy from rising inflation may soon weigh on high protein demand. The negative interest rate environment was projected to end by September, and that help the Euro to gain on the USD.
- Indonesia is still looking at changing rules to ensure domestic supplies of cooking oil. Overnight they announced replacing its subsidy on bulk cooking oil to a domestic price obligation program.
- Anec: Brazil soybean exports for May seen at 11.278 million tons, down from 11.483 previous.
- EU soybean imports by May 22 for the July 2021-22 season totaled 12.83 million tons, versus 13.52 million for the same period 2020-21.

## Export Developments

- China plans to sell another 500,000 tons of soybeans from reserves on May 27.
- The USDA seeks 5,710 tons of packaged veg oil for use in export programs for shipping July 1-25 on June 1, with notice following day.

## Third Consecutive La Niña? What to Expect from Soybean Yields in the United States, Brazil and Argentina

## Soybean oil – July 77-84

### Wheat

- Wheat futures extended gains early but prices collapsed after the funds resumed selling. Chicago wheat has been down 4/5 last trading sessions. Funds have sold an estimated net 49,000 contracts since May 18 and are estimated at net short 18,000 (managed money futures only) contracts. Global trade flows have slowed, and US weather is improving (for spring wheat producers and central Great Plains winter wheat production). Past 24-H precipitation below.

- The trade is monitoring India. If they relax on wheat exports, a potential 2.5 million tons could be cleared for exports.
- APK-Inform raised their estimate of the Ukraine 2022 wheat crop to 17.1 million tons from 16.96 million previous. The 2022-23 Ukraine grain forecast was increased to 39.4 million tons from 33.2 million previous.
- Egypt said they have enough wheat reserves for 4.5 months. They procured 2.7 million tons from their local harvest, out of 5 million they aim for.
- We are nearing 3 months into the Ukraine/Russia conflict.
- September Paris wheat fell 16.50 to 410.50 euros a ton.
- France is expected to see some rain this week and cooler temperatures.
- EU soft wheat exports by May 22 for the July 2021-22 season totaled 24.13 million tons, versus 24.23 million for the same period 2020-21.

### Export Developments.

- Jordan passed on 120,000 tons of wheat for Aug/Sep shipment.
- Pakistan seeks 500,000 tons of wheat on May 25. Bulk shipment is sought to Pakistan in June to July 2022.
- Jordan seeks on 120,000 tons of barley on May 26 for Aug/Sep shipment.
- Bangladesh seeks 50,000 tons of wheat on May 29 for shipment within 40 days.

### Rice/Other

- May 24 (Reuters) - ICE cotton futures slipped on Tuesday, pressured by demand concerns and rain in key West Texas growing regions which could help boost supply.
- (Reuters) - India has restricted sugar exports for the first time in six years to prevent a surge in domestic prices and asked traders to secure permission for overseas sale of the sweetener from June 1 to Oct. 31, the government said in a notification on Tuesday.

# Disclaimer

TO CLIENTS/PROSPECTS OF FUTURES INTERNATIONAL, SEE RISK DISCLOSURE BELOW:

THIS COMMUNICATION IS CONVEYED AS A SOLICITATION FOR ENTERING INTO A DERIVATIVES TRANSACTION.

Any trading recommendations and market or other information to Customer by Futures International (FI), although based upon information obtained from sources believed by FI to be reliable may not be accurate and may be changed without notice to customer. FI makes no guarantee as to the accuracy or completeness of any of the information or recommendations furnished to Customer. Customer understands that FI, its managers, employees and/or affiliates may have a position in commodity futures, options or other derivatives which may not be consistent with the recommendations furnished by FI to Customer.

The risk of trading futures and options and other derivatives involves a substantial risk of loss and is not suitable for all persons. In purchasing an option, the risk is limited to the premium paid, and all commissions and fees involved with the trade. When an option is shorted or written, the writer of the option has unlimited risk with respect to the option written. The use of options strategies such as a straddles and strangles involve multiple option positions and may substantially increase the amount of commissions and fees paid to execute the strategy. Option prices do not necessarily move in tandem with cash or futures prices. Each person must consider whether a particular trade, combination of trades or strategy is suitable for that person's financial means and objectives.

This material may include discussions of seasonal patterns, however, futures prices have already factored in the seasonal aspects of supply and demand, and seasonal patterns are no indication of future market trends. Finally, past performance is not indicative of future results.

This communication may contain links to third party websites which are not under the control of FI and FI is not responsible for their content. Products and services are offered only in jurisdictions where solicitation and sale are lawful, and in accordance with applicable laws and regulations in each such jurisdiction.
