Private exporters reported sales of 112,800 metric tons of corn for delivery to unknown destinations during the 2022/2023 marketing year.

Wide trading range today for the soybean complex and grains. Short covering, bottom picking and positioning ahead of the USDA reports supported most markets. Outside markets such as WTI crude oil lent support. Look for a choppy trade through Thursday. Friday is USDA report day.

World Weather Inc.

WEATHER TO WATCH

- A band of heavy rainfall occurred overnight last night from central Louisiana through central Mississippi, central Alabama and central Georgia ending in central South Carolina
 - Amounts ranged from 2.00 to more than 5.43 inches with a few totals over 7.00 inches resulting in some flooding
 - This band of heavy rain was also a part of the severe weather outbreak that occurred Saturday into Sunday
- Nebraska, northern Kansas and northeastern Colorado received snow and rain during the weekend
 - Most of the precipitation was light varying from a few hundredths of an inch to 0.20 inch; however, northwestern Kansas, northeastern Colorado and southern Nebraska wheat areas received 0.15 to 0.45 inch of moisture with local totals as great as 0.95 inch in southwestern Nebraska
 - Snowfall ranged from 2 to 10 inches most of which occurred from northeastern Colorado and northwestern Kansas through southern and east-central Nebraska
 - Central Oklahoma reported moisture totals to 0.10 inch with a local total of 0.33 inch on the eastern most fringe of wheat country
 - The southwestern Plains were dry
- Heavy snow also fell from east-central lowa and northwestern Illinois to eastern Wisconsin and northern
 Michigan Friday into Saturday with 21 inches at Kimberley, Wisconsin and 5 to 17 inches common
- Cold air will be over the northern and central U.S. Plains this week with freezes from the Texas Panhandle into Canada with readings in the positive and negative single digits Fahrenheit likely in the far northern Plains where normal low temperatures should be in the 20s at this time of year.
 - Extreme lows Wednesday morning may drop to near -10 Fahrenheit as far south as northern and eastern North Dakota
- North-central United States (northern Plains and upper Midwest) will remain much colder than usual for the next ten days
 - o Some warming is expected Thursday and again during the weekend that may induce a little snowmelt
 - o Temperatures will also be cooler than usual in the western United States during most of this period
 - o The southeastern United States will experience waves of warm weather
- U.S. southwestern Plains; including West Texas, the Texas Panhandle, southwestern Kansas and southeastern Colorado (the southwestern hard red winter wheat region) are unlikely to receive significant rain in the next ten days
- U.S. rainfall is still advertised to be frequent in the Midwest, Delta and interior southeastern states during the next ten days
 - The environment will not support fieldwork very well and some drier and warmer weather may be needed soon to get farmers into their fields during the ideal planting time
- Flood potentials remain very high in the upper Midwest and Red River Basin during April as warmer temperatures and rain combine to melt snow and create some significant runoff.
 - A frequent succession of weather systems will return to the northeastern Plains and upper Midwest late this week and continue into next week
 - The first large storm may impact South Dakota and portions of both Minnesota and southeastern North Dakota late this week with significant rain and snow
 - North Dakota, Montana and northwestern Minnesota will not see nearly as much precipitation as the above areas
 - A second storm is possible early to mid-week next week

- Dryness in the interior U.S. Pacific Northwest will remain while snow impacts the mountainous region surrounding the Yakima Valley and north-central Oregon
- South Texas, the Texas Blacklands and the Texas Coastal Bend region will get some rain later this week into next week
- California's heavier precipitation events should be over, although light precipitation events will continue to come and go periodically
 - Flooding in California later this spring could be significant in a few areas as water reservoirs reach full capacity warranting a spillage of water through dams as mountain snowmelt reaches the storage facilities
- Canada's Prairies will continue drier than usual this week especially in the interior southwest where there is need for significant precipitation this spring in order to support planting and early crop development.
 - Precipitation is expected to increase during April
- Mexico drought will continue into April, although there will be some periodic opportunity for rain in eastern parts of the nation starting at mid-week this week and lasting into next week
- Argentina took a break from significant rain during the weekend and that break will continue through Thursday allowing recent moisture to percolate down into the ground
 - Late season, immature, crops will benefit from the recent rain and this week's sunshine to promote more aggressive crop development
 - Most of the crop improvement will be in a very small portion of the production region.
 - O Drier weather this week will be good for improving early season crop maturation and early season harvest progress
- Argentina rainfall will begin to ramp up again during the late week and weekend with the greatest rain expected next week
 - Drought will be eased additionally by next week's rain and some crop improvement will continue, but the nation's total production cannot recover very well from the horrific impacts of heat and dryness during much of the growing season
- Good drying conditions occurred in Brazil during the weekend favoring late season soybean and first season corn harvesting
 - Rice maturation and harvesting advanced as well and some improvement in sugarcane, coffee and citrus development also occurred
 - o Early season wheat planting advanced in parts of the interior southeast
- Brazil weather over the next two weeks will include scattered showers and thunderstorms
 - Much of the rain will be light and may not counter evaporation very well
 - Some net drying will occur, but most areas will remain favorably moist except northern and eastern Minas Gerais and Espirito Santo to interior Bahia where dryness will prevail
 - o GFS model is still trying to increase precipitation during the second week of the outlook
 - World Weather, Inc. does not believe there is much reason to expect monsoon rain to completely withdraw before mid-April
- Abundant rain is expected in Brazil's Amazon River Basin as well as Peru, Colombia and surrounding areas
- Far southern China received heavy rain during the weekend with some flooding suspected
 - Rainfall of 3.50 to nearly 13.22 inches occurred from eastern Guangxi through southern Hunan and Guangdong to southern Zhejiang and Fujian
 - Rainfall diminished northward to the Yangtze River while most other areas in China were dry or mostly dry
 - o Temperatures were mild to cool biased
- China's rain through this workweek will be mostly limited to areas near and south of the Yangtze River and amounts of 2.00 to 6.00 inches will result with the southern coastal provinces wettest

- Other areas in China will be dry with a warming trend likely and temperatures rising above normal in a few days
- Additional flooding may impact a part of the far south
 - Some of the moisture will be good for future rice planting and development, but fieldwork of all kinds will be delayed by the rain
- China's southern rain will shift northward impacting many crop areas in east-central and northeastern China during the weekend and more likely next week
 - Moisture totals will be greatest in the Yangtze River Basin, but some welcome moisture may reach the Yellow River Basin and North China Plain for a brief period of time.
- Northern Pakistan and far northern India received rain during the weekend
 - o Moisture totals varied from 0.25 to 1.25 inches
 - Wettest in interior northern Pakistan, Punjab, Haryana, northern Uttar Pradesh and a parts of both Uttarakhand and western Himachal Pradesh
 - A few amounts reached over 2.00 inches
 - Wheat quality was at risk along with a few other winter crops
 - Other areas in India were either dry or mostly dry
- Northern India and Pakistan are likely to see another wave of light rain late this week with 0.10 to 0.65 inch
 of moisture resulting
 - That will be sufficient to keep pressure on wheat and a few other winter crops in the far northern parts of India
 - Crops elsewhere in India should fill and mature normally with some early harvesting under way and it will increase during April and May
- North Africa is warming up while staying dry
 - o No precipitation fell during the weekend and high temperatures were in the 70s and lower 80s
 - Heat and dryness are cutting into production potentials
 - o Another week of dry or mostly dry weather is expected before rain chances may improve in a part of the region
 - Showers will be possible next week, but resulting rainfall does not look to be very great leaving a need for greater precipitation, despite a little relief in some areas
- Europe will experience waves of rain over the next ten days to two weeks
 - Eastern Spain will remain one of the driest areas in the continent for a while and temperatures will be warmer than usual throughout the next ten days possibly threatening dryland winter crops and some of the planting of spring crops
 - Abundant moisture is likely elsewhere with "some" relief to dryness in Romania and the lower
 Danube River Basin during the second week of the outlook
- West-central Africa precipitation will be erratically distributed over the next few days, but it may increase next week
 - o Recent precipitation has been erratic with some areas getting plenty of rain and others need more
 - Rain is expected periodically throughout the next couple of weeks with most areas getting at least some rain
 - Some of the rain will be locally heavy
- Australia rain fell in both Western Australia and near and east of the Great Dividing Range during the weekend
 - o Some rain fell in southeastern Queensland as well
 - o Moisture totals varied from 0.15 to 0.79 inch with local totals over 1.00 inch
- Australia rainfall will be limited for a while this week, but it will increase in the east next week

- The change will be good for a few late season crops, but drier weather may be needed to protect early maturing cotton in the open boll stage
- Central America rainfall will be greatest in Guatemala and from Costa Rica to Panama during the next ten days
 - Net drying is likely in portions of Honduras and Nicaragua
- South Africa crop weather has been very good this year, although portions of the nation are drying out now and the trend may continue for a while
 - o Early season maturation and harvesting should go well
 - o Late season crops will need some beneficial moisture later this season
 - Rain prospects are fair over the next ten days, but the precipitation should be erratic and often lighter than usual
- Southeastern Canada's corn, wheat and soybean production region is favorably moist and poised for a good start to spring, although fieldwork is still a few weeks away
- Turkey will receive frequent bouts of rain over the next ten days bolstering soil moisture for wheat development and rice and cotton planting
 - o Portions of the nation are already wet after recent rain and mountain snow
 - o Other spring planting will benefit from the coming moisture boost
- Other areas in the Middle East have been experiencing a boost in precipitation
 - o This week's precipitation will be greatest in Turkey, Iraq and western Iran
- Improving soil moisture throughout the Middle East is improving rice and cotton planting prospects (among other crops) and winter wheat conditions are improving
- Philippines rainfall will be light to locally moderate most days through the coming week
 - Weather conditions in the next ten days should be mostly good for the nation, although the south may eventually turn quite wet
- Indonesia and Malaysia rainfall will occur abundantly during the next two weeks with all areas impacted and no area experiencing much net drying
- Mainland areas of Southeast Asia will experience a general boost in precipitation this week and next week which is normal at this time of year.
 - Recent temperatures have been heating up while it has been dry and that, too, is typical of this time of year ahead of the coming monsoon season
- Eastern Africa precipitation is expected to scatter daily from Tanzania to Ethiopia over the next ten days
 - o The moisture will be good for ongoing crop development
- Today's Southern Oscillation Index was -0.03 and it was expected to move erratically over the coming week Source: World Weather, INC.

Bloomberg Ag calendar

Monday, March 27:

• USDA export inspections - corn, soybeans, wheat, 11am

Tuesday, March 28:

• EU weekly grain, oilseed import and export data

Wednesday, March 29:

- EIA weekly US ethanol inventories, production, 10:30am
- Coffee, rice and rubber exports from Vietnam

Thursday, March 30:

- USDA weekly net-export sales for corn, soybeans, wheat, cotton, pork and beef, 8:30am
- Port of Rouen data on French grain exports
- USDA hogs & pigs inventory, 3pm

CME FedWatch Tool https://www.cmegroup.com/markets/interest-rates/cme-fedwatch-tool.html

Corn

- CBOT corn futures traded two-sided, ending on a strong note from light buying after fund selling dried up. Note the latest Commitment of Traders report did show speculators settled down after previous four weeks of heavy selling. Higher soybeans underpinned corn. Additional USDA corn sales announcement and higher WTI crude oil market helped prices. Look for positioning this week ahead of USDA's March 31 reports.
- USDA reported 112,800 tons of corn sold to unknown. One source said it might be for Japan. US export sales to Japan are below average for this time of year (graph after the text).
- USDA US corn export inspections as of March 23, 2023 were 666,325 tons, below a range of trade expectations, below 1,192,093 tons previous week and compares to 1,614,664 tons year ago. Major countries included Mexico for 262,390 tons, Colombia for 108,721 tons, and China for 68,152 tons.
- USDA hogs and pigs report is due out on Thursday and a Bloomberg poll sees the US hag herd as of March 1 seen rising 0.4% from a year earlier to 72.97 million head. A Reuters poll see a 0.2% increase. Reuters trade estimates are below the export development section.
- Some people suggested the weakness earlier in the US corn market was due to weaker China hog
 prices, which may curb China feed demand if inventories decline. China corn futures declined to an
 August low on Monday.
- China's sow herd increased 1.7% for the month of February from a year earlier, according to the AgMin. The herd was 43.4 million sows, 5% above the government target.

Pro Farmer acreage estimates:

Corn 92.1 million acres

Beans 88.4 m acres

Bloomberg corn average is 90.9. Low end 87.7 & high end 92.1.

Bloomberg soybean average is 88.3 with 87.4-89.6 range

EIA: Renewable generation surpassed coal and nuclear in the U.S. electric power sector in 2022 https://www.eia.gov/todayinenergy/detail.php?id=55960&src=email

Export developments.

 USDA reported private exporters reported sales of 112,800 metric tons of corn for delivery to unknown destinations during the 2022/2023 marketing year.

Updated 03/21/23 May corn \$5.85-\$6.75 July corn \$5.75-\$7.00

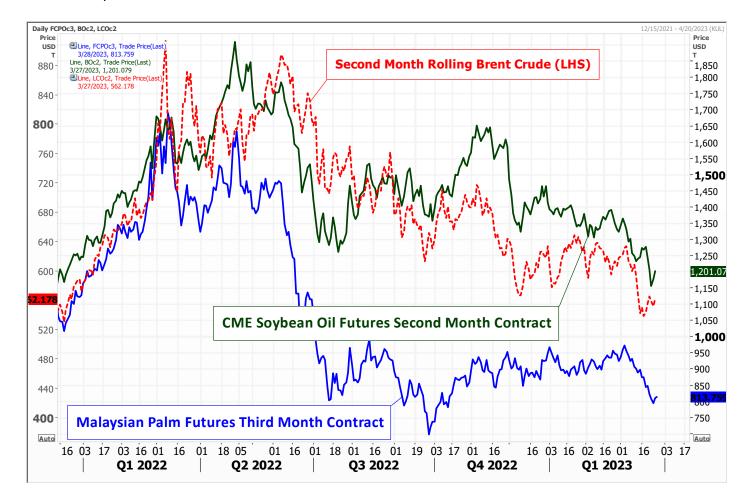

Soybeans

- US soybeans rallied from initial strength in soybean oil. Oil share improved but gave up some gains after meal was able to rebound to close mixed in the front months and higher in the back months. There were a good amount of put spreads just after the market opened this morning. After fund selling dried, soybeans rallied. Soybean inspections were highest since mid-February, and about 10 million bushels above its 5-year average. EU rapeseed prices were 13.00 euros higher at 470.00 bass the May contract. Soybean oil was up little more than 120 points from higher WTI crude oil and palm futures snapping a 7-day losing streak. China soybean products rebounded from trading lower last week.
- USDA US soybean export inspections as of March 23, 2023 were 888,707 tons, upper end of a range of trade expectations, above 719,532 tons previous week and compares to 631,604 tons year ago. Major countries included China for 506,532 tons, Mexico for 129,112 tons, and Germany for 69,131 tons.
- AgRural estimated Brazil soybean harvest progress at 70 percent through Thursday, up 8 points from the previous week and compares to 75 percent last year.
- China was said to have bought a cargo of Brazilian soybeans Monday after picking up three last week. US soybean sales to China have been slow and the season window for fresh sales is narrowing.

- Indonesia January palm oil exports were 2.95 million tons, up 35.2% from a year ago. Production was 3.89 MMT. Stocks fell to 3.09 MMT from 3.56 MMT at the end of January 2022.
- Cargo surveyor AmSpec reported Malaysian palm oil exports during the March 1-25 period at 1.137 million tons, up 19.8 percent from the same period previous month.
- Cargo surveyor ITS reported Malaysian palm oil exports during the March 1-25 period at 1.151 million tons, up 11.4 percent from the same period previous month.

Soybean meal – May \$400-\$475

Soybean oil – May 49.50-55.55

Wheat

 US wheat futures rallied after trading lower earlier this morning, in part from strong EU wheat and short covering. A reversal in corn and sharply higher soybeans lent support. Some cited uncertainty over Black Sea shipping as a reason US and EU wheat futures were higher. Although Black Sea news was light over the weekend. Turkey is in for a large amount of wheat tomorrow.

- US wheat producer selling slowed after prices trended lower this month.
- USDA US all-wheat export inspections as of March 23, 2023 were 392,484 tons, within a range of trade expectations, above 375,271 tons previous week and compares to 343,773 tons year ago. Major countries included Mexico for 86,751 tons, China for 68,249 tons, and Korea Rep for 54,475 tons.
- Paris May wheat rallied 7.25 euros to 266.50. Last week it hit a multi month low.
- Iraq seeks to import 600,000 to 1,000,000 tons of wheat this season after production is expected to hit their 4.0-million-ton objective to ensure food supply.
- Ukraine grain exports for the week as of March 26 were 804,197 tons, down from 1.08 million tons week earlier.
- Reuters: Prices for Russian wheat with 12.5% protein content, delivered free on board (FOB) from Black Sea ports, fell \$5 to \$272 a ton last week, the IKAR agriculture consultancy said.
- As reported last week, the unfavorable weather across India's wheat area is still being addressed.
 Punjab officials said 40 percent of their wheat crop was impacted, an may result in a 15 percent yield loss.

Export Developments.

- Turkey's TMO seeks 695,000 tons of red milling wheat on March 28 for shipment May 18 to June 16 and June 12 to July 10.
- Jordan seeks 120,000 tons of wheat on March 28 for Sep-Oct shipment.
- China plans to auction off 140,000 tons of wheat from state reserves on March 29.

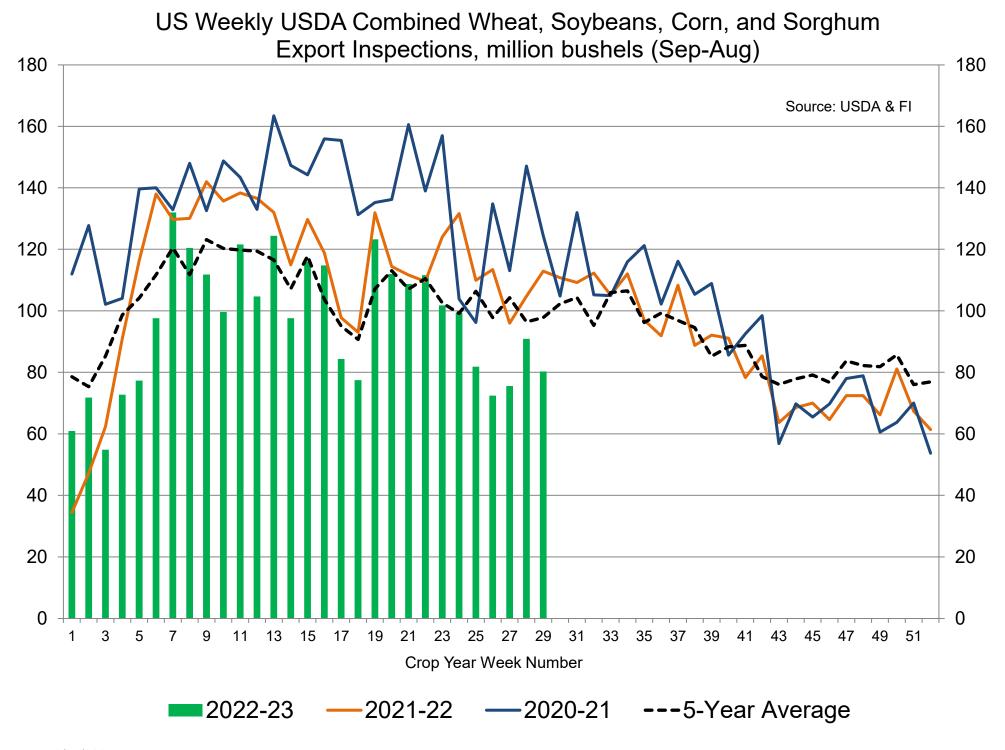

Rice/Other

- Results awaited: South Korea seeks 121,800 tons of rice, most of it from China.
- (Reuters) Indonesia's food procurement agency (Bulog) will import 2 million tons of rice until December this year, a Bulog official said. Awaluddin Iqbal, Bulog's corporate secretary said the first phase will see the import of 500,000 tons. The policy is aimed at stabilizing rice supplies.

Disclaimer

TO CLIENTS/PROSPECTS OF FUTURES INTERNATIONAL, SEE RISK DISCLOSURE BELOW:

THIS COMMUNICATION IS CONVEYED AS A SOLICITATION FOR ENTERING INTO A DERIVATIVES TRANSACTION.

Any trading recommendations and market or other information to Customer by Futures International (FI), although based upon information obtained from sources believed by FI to be reliable may not be accurate and may be changed without notice to customer. FI makes no guarantee as to the accuracy or completeness of any of the information or recommendations furnished to Customer. Customer understands that FI, its managers, employees and/or affiliates may have a position in commodity futures, options or other derivatives which may not be consistent with the recommendations furnished by FI to Customer.

The risk of trading futures and options and other derivatives involves a substantial risk of loss and is not suitable for all persons. In purchasing an option, the risk is limited to the premium paid, and all commissions and fees involved with the trade. When an option is shorted or written, the writer of the option has unlimited risk with respect to the option written. The use of options strategies such as a straddles and strangles involve multiple option positions and may substantially increase the amount of commissions and fees paid to execute the strategy. Option prices do not necessarily move in tandem with cash or futures prices. Each person must consider whether a particular trade, combination of trades or strategy is suitable for that person's financial means and objectives.

This material may include discussions of seasonal patterns, however, futures prices have already factored in the seasonal aspects of supply and demand, and seasonal patterns are no indication of future market trends. Finally, past performance is not indicative of future results.

This communication may contain links to third party websites which are not under the control of FI and FI is not responsible for their content. Products and services are offered only in jurisdictions where solicitation and sale are lawful, and in accordance with applicable laws and regulations in each such jurisdiction.
