

*OPEC+ may cut crude oil production (see macro section).*

*USDA reported a bullish soybean March 1 stocks estimate and 2023 soybean planted area. The stocks estimate for soybeans could suggest a lower than expected 2022 US production, but the trade needs to wait until the end of September to see if USDA downward revises output. Corn stocks coming in below expectations indicate less corn feed for the 2022-23 crop year, and USDA next month may lower the corn residual by 50-75 million bushels. US corn acres were well above an average trade guess and warranted the bull spreading with nearby soybeans climbing 31 cents (spill over). All wheat stocks were reported slightly higher than trade expectations. All wheat plantings were above expectations led by winter wheat and durum. Higher protein wheat ended higher. Our trade estimate vs. actual and new-crop price change historical table is attached. Also attached is our US 2023 updated planted area for selected crops that show the 15 crop total came in below our expectations but were likely above what the trade was looking for. Going forward, we see the total US crop area trending lower. USDA tends to report a large March US 15-crop figure then work down from that throughout the crop year. There is still time to switch from corn to soybeans. USDA may report spring and corn planting progress Monday afternoon (1-2 percent for both).*

U.S. quarterly stocks as of March 1, 2023 (in billions of bushels):

	USDA March 1 estimate	Average of analysts' estimates	Range of analysts' estimates	USDA March 1, 2022	USDA Dec. 1, 2022
Wheat	0.946	0.934	0.891-1.020	1.029	1.280
Corn	7.401	7.470	7.240-7.830	7.758	10.809
Soybeans	1.685	1.742	1.600-1.910	1.932	3.022

U.S. plantings of major crops for 2023 harvest (in millions of acres):

	USDA March 31	Average of estimate	Range of analysts' estimates	USDA 2023 Outlook	USDA 2022 final figures
Corn	91.996	90.880	87.677-92.050	91.000	88.579

## **World Weather Inc.**

### **WEATHER TO WATCH**

- DRY AREAS TO WATCH
  - Spain, North Africa, the lower Danube River Basin, Yunnan (China), U.S. western high Plains, the Yakima Valley of Washington and north-central Oregon, Mexico, southwestern Canada's Prairies and interior eastern and southern Australia (although these areas should get moisture in the autumn)
- WET AREAS TO WATCH
  - U.S. Red River Basin of the North, Northern Mississippi River Basin, California, U.S. Delta and Tennessee River Basin, southern Manitoba (Canada), northwestern Russia, China's Yangtze River Basin and portions of Indonesia and Malaysia
- PACIFIC DECADAL OSCILLATION (PDO)
  - Remains strong and expected to continue strong, although some weakening is likely over time
- ENSO CONDITIONS
  - Neutral ENSO conditions are prevalent today, although the footprint of the past three years of La Nina is lingering so that many La Nina related weather anomalies are still prevailing
  - El Nino development is likely later this year
- Southern Oscillation Index today was -2.07 and it was expected to move erratically lower over the coming week

### **MOST IMPORTANT WEATHER OF THE DAY**

- U.S. southwestern Plains may experience some showers late next week and into the following weekend, but resulting precipitation is unlikely to be enough to seriously change topsoil moisture
  - 06z GFS model run was too wet around April 10 and will not verify
- Central U.S. hard red winter wheat production areas are advertised to be drier biased for the next ten days
  - Warm weather Thursday stimulated faster drying especially with strong wind speeds
  - Temperatures will be bounce around for a while in this first week of the outlook and then may become more consistently warm in the second week of April
- Unusual cold in Canada's Prairies and the western and north-central United States will abate after this first week of the outlook
  - There will be lingering coolness in the snow covered areas in the north-central states in the second week, but enough warming is expected to induce some snowmelt
- U.S. Delta and southeastern states are being plagued by too much rain and soggy field conditions
  - This trend will continue for the next ten days resulting in limited fieldwork
    - Drier and warmer weather must evolve soon to get fieldwork back on track especially in the Delta and Tennessee River Basin
- U.S. lower Midwest will experience waves of rain in the coming ten days keeping the ground saturated or nearly saturated which may lead to some delay in the start of spring planting
- Texas Blacklands, Coastal Bend and a part of South Texas will get some rain next week and into the following weekend to benefit corn, sorghum and cotton planting
- California's succession of storms will be diminishing for a while and warming will slowly start to the snowmelt season
  - Runoff this year will be significant when temperatures heat up significantly resulting in the need to release water through the state's dams which may lead to flooding of some agricultural land near important rivers and streams
- Canada's Prairies will not likely see an abundance of precipitation for a while and temperatures will trend warmer after next week

W: 312.604.1366 | [treilly@futures-int.com](mailto:treilly@futures-int.com)

- The environment should begin melting snow more consistently, but the drier areas that do not have much snow on the ground will only dry out additionally during the period
- The Yakima Valley of Washington and north-central Oregon are drier than usual this year and that trend will continue over the next ten days.
  - A boost in precipitation would be good for unirrigated winter and spring crop areas, although there is no crisis
- Southern Argentina will continue to dry out over the next ten days, but sufficient subsoil moisture in some areas will carry on favorable crop development
- Central and northern Argentina will experience frequent precipitation over the next ten days resulting in a bolstering of topsoil moisture and possibly some disruption to early season grain and oilseed harvesting
  - Open boll cotton may experience some discoloring as well
- Brazil weather is still perceived as being mostly very good
  - Recent drying in center south crop areas has been promoting fieldwork; including the late harvest of soybeans
  - Rain is expected to begin again in the second week of the forecast and that should help replenish topsoil moisture in support of Safrinha crop development
- Northern India will receive additional showers this weekend bringing down crop quality in many winter wheat and other crop areas in the north
  - Crop quality declines have been ongoing in some of the far north in the past couple of weeks
- Europe and the western CIS will continue in an active weather pattern for a while with frequent bouts of rain expected that will keep soil moisture adequate to abundant
  - Some excessive soil moisture is expected to continue especially in western Russia, the Baltic States, Belarus and western Ukraine
    - Planting delays may evolve later this spring in drying does not evolve, but there is plenty of time for that
- Russia's Southern Region, Kazakhstan and eastern Ukraine weather is expected to remain mostly very good for winter crops and for the planting of spring crops
- China's North China Plain will receive some much needed rain this weekend lifting soil moisture for improved winter wheat development and in support of spring planting
- China's rapeseed region will experience an abundance of rain again next week, but the region will dry down for a few days first
  - Too much rain occurred for a while in this past week and drying was needed
- Yunnan, China is too dry and needs moisture for early season corn and rice as well as other crops
- Indonesia, Malaysia and Philippines rainfall will continue abundant for another week to ten days, but may trend a little drier in the following ten days
- Mainland areas of Southeast Asia are experiencing a favorable environment for pre-monsoonal precipitation
- East-central Africa rainfall will continue to fall abundantly and will likely be more than sufficient to maintain coffee and cocoa crop needs
- West-central Africa rainfall will continue scattered frequently, but some days will be wetter than others
  - Most of the region's coffee, cocoa, sugarcane and rice will benefit from the rain that does fall, but a few areas will need greater volumes of it
    - Cotton areas will need greater rain soon
- South Africa weather will remain well mixed for support of corn, sorghum, sunseed, soybeans, rice, cotton, citrus sugarcane and other crops
  - Production potentials are high late summer weather is mostly very good
- Eastern Australia rainfall will be sporadic favoring easternmost cotton and sorghum areas

- Western and southern Australia would benefit from increasing rainfall during April to raise soil moisture for the start of autumn planting
- Mexico drought will continue into April, although there will be some periodic opportunity for rain in eastern parts of the nation starting at mid-week this week and lasting into next week
- Central America rainfall will be greatest in Guatemala and from Costa Rica to Panama during the next ten days
  - Net drying is likely in portions of Honduras and Nicaragua
- Southeastern Canada's corn, wheat and soybean production region is favorably moist and poised for a good start to spring, although fieldwork is still a few weeks away
- Turkey will receive frequent bouts of rain over the next ten days bolstering soil moisture for wheat development and rice and cotton planting
  - Portions of the nation are already wet after recent rain and mountain snow
  - Other spring planting will benefit from the coming moisture boost
- Other areas in the Middle East will experience lighter and less frequent rain for a while

## Macros

April 2 (Reuters) - Saudi Arabia and other OPEC+ oil producers on Sunday announced further cuts in their production amounting to around 1.16 million barrels per day in a surprise move that analysts said would cause an immediate rise in prices. The development comes a day before a virtual meeting of an OPEC+ ministerial panel, which includes Saudi Arabia and Russia, and which had been expected to stick to 2 million bpd of cuts already in place until the end of 2023.

## Corn

- Corn futures rallied for old crop and ended slightly lower for new crop after nearby soybeans supported the May through September contracts and a larger than expected US corn area kept new-crop contracts on the defensive. May corn ended 11 cents higher and December down 0.50 cent. US corn stocks as of March 1 were lowest in 9 years. Plantings are expected to increase 4 percent from last year.

- CME hogs for the back month contracts were higher Friday after USDA reported a lower sows figure Thursday.
- Safras & Mercado: Brazil center-south corn production at 23.7 MMT, up from 21.9 MMT previous and 21.9 MMT last season.
- Ukraine planted 500,000 hectares of spring grains as of late last week. The grain area could decline 12 percent from 2022.
- We kept our corn for ethanol use unchanged at 5.225 billion, 25 million below USDA.

**July corn \$5.75-\$7.00**

## Soybeans

- US soybeans rose by nearby May contract on much lower than expected March 1 stocks. New crop was higher on a below average US 2023 soybean planted area. May futures rose above \$15 for fist time since March 13. May soybeans ended the month up 31 cents. The 87.5 million acre estimate is slightly above 2022. Stocks were reported 13 percent below year ago.
- USDA S&D polls should be out in a few business days.
- ITS reported March Malaysian palm oil exports up 24 percent from February at 1.438 MMT. AmSpec reported a 32 percent increase to 1.402 MMT.
- Argentina's Rosario port strike last week is not expected to have a major impact on grain exports.
- Argentina's Buenos Aires grains exchange left booth its soybean and corn production unchanged last week at 25 million tons and 36 million, respectively.
- More details on Argentina's new soybean dollar might be released next week. It's expected to go into effect this month.
- The Argentina announcement initially pressured CBOT meal futures before the USDA report on Friday, but oil share closed higher anyway at the end of the week after EIA's feedstock update, friendly for SBO.

- USDA is too low for 2022-23 US soybean oil for biodiesel use.
- EIA reported January soybean oil for biodiesel use at 557 million pounds and renewable use at 384 million pounds, a 941 million pounds total, up from a combined 885 million for December and 791 million year earlier. Renewable use of 384 million was up from 352 million for December and 248 million for January 2022. We are 200 million pounds above USDA for total SBO for biodiesel use at 11.8 billion pounds, unchanged from our previous estimate. Graphs attached after text.

#### Wheat

- Mixed trade for US wheat futures with nearby contracts for Chicago unchanged and KC and MN higher. USDA reported a higher than expected US winter wheat crop area. All-wheat stocks were near expectations but down 8 percent from 2022. CBOT May Chicago wheat fell 13.25 cents for the month.

#### Terry Reilly Grain Research

Futures International | One Lincoln Centre, Suite 1450

W: 312.604.1366 | treilly@futures-int.com

US all-wheat plantings for 2023 of 49.9 million acres were up 9% from 2022, but spring wheat seedings were down 2 percent from 2022.

- EU May milling wheat was down 1.00 euro at 260.25.
- On Thursday the EU Commission raised their estimate of EU soft wheat exports to 36.0 MMT from 32.00 month earlier, which would be up 23 percent from the previous season if realized.
- Last week's announcements of two major grain exporting companies either weighing on, and/or exiting the Russian grain trade is leaving many to question whether or not Russia will be able to keep pace of their rapid export program.
- Turkey said more than 20 percent of their food production was lost from earthquakes. Initial assessment points to \$1.3b in damage and \$5.1b in losses to the agriculture sector, according to Bloomberg.
- USDA will resume national winter wheat crop ratings Monday, April 3. Our initial estimate for the US combined winter wheat good and excellent categories below. Spring wheat could end up 1-2 percent and corn 1 percent.

### Export Developments.

- Jordan seeks 120,000 tons of barley on April 4 for Sep and/or Oct shipment.
- Jordan seeks 120,000 tons of wheat on April 5 for Sep and/or Oct shipment.
- China will auction off wheat from state reserves in two batches next week.

### Rice/Other

- USDA may report rice planting progress around 8 percent on Monday.

# Disclaimer

TO CLIENTS/PROSPECTS OF FUTURES INTERNATIONAL, SEE RISK DISCLOSURE BELOW:

THIS COMMUNICATION IS CONVEYED AS A SOLICITATION FOR ENTERING INTO A DERIVATIVES TRANSACTION.

Any trading recommendations and market or other information to Customer by Futures International (FI), although based upon information obtained from sources believed by FI to be reliable may not be accurate and may be changed without notice to customer. FI makes no guarantee as to the accuracy or completeness of any of the information or recommendations furnished to Customer. Customer understands that FI, its managers, employees and/or affiliates may have a position in commodity futures, options or other derivatives which may not be consistent with the recommendations furnished by FI to Customer.

The risk of trading futures and options and other derivatives involves a substantial risk of loss and is not suitable for all persons. In purchasing an option, the risk is limited to the premium paid, and all commissions and fees involved with the trade. When an option is shorted or written, the writer of the option has unlimited risk with respect to the option written. The use of options strategies such as a straddles and strangles involve multiple option positions and may substantially increase the amount of commissions and fees paid to execute the strategy. Option prices do not necessarily move in tandem with cash or futures prices. Each person must consider whether a particular trade, combination of trades or strategy is suitable for that person's financial means and objectives.

This material may include discussions of seasonal patterns, however, futures prices have already factored in the seasonal aspects of supply and demand, and seasonal patterns are no indication of future market trends. Finally, past performance is not indicative of future results.

This communication may contain links to third party websites which are not under the control of FI and FI is not responsible for their content. Products and services are offered only in jurisdictions where solicitation and sale are lawful, and in accordance with applicable laws and regulations in each such jurisdiction.
