

The soybean complex and grains ended lower. The soybean products pressured soybeans. May crush fell to a fresh contract low and settled at \$1.04. It was over \$2.00 a few weeks ago. Meal led the complex lower as Argentina is expected to roll out details for the soybean dollar on Wednesday. Corn started and ended lower mainly on profit taking. Wheat traded two-sided and ended lower in part to weakness in corn and soybeans.

Fund estimates as of April 4

#### Weather

.01

DOC/NOAA/NWS/NCEP/WPC

Severe weather for the central US is expected to occur tonight into Wednesday.

#### World Weather Inc.

MOST IMPORTANT WEATHER OF THE DAY

- New snowstorm in U.S. Northern Plains and upper Midwest has begun and it will continue through Wednesday raising the potential for severe flooding in the Red River Basin later this month
  - New snowfall will vary from 6 to 14 inches from South Dakota to northern Minnesota and southeastern Manitoba with a few amounts to 20 inches
  - Serious precautions should now be taken in flood prone areas of the Red River Basin to minimize damage when the snow melts
    - Snow water equivalents today vary from 4.00 to nearly 10.00 inches across the Red River Basin, a part of the Missouri River Basin in North Dakota and in the uppermost Mississippi River Basin and especially the western Great Lakes region
    - The rate in which snow melts will determine the seriousness of flooding and that in conjunction with new precipitation will determine whether or not the region will be faced with prevent plant conditions this spring
  - Warming is likely in the next ten days to two weeks with the April 9-15 period possibly warming above normal
  - $\circ$   $\;$  Moisture totals this week will vary from 0.50 to 1.75 inches

#### Terry Reilly Grain Research

- Next week's U.S. Midwest drier and warmer weather will be very important for early season fieldwork to begin.
  - o Warming temperatures will help to accelerate drying rates between rain events
- Negative phase of PDO remains strong and is likely to return a southwest flow pattern to the central parts of the U.S. later this month
  - Until other weather patterns kick in this scenario may play out frequently resulting in wet weather in the western United States with a cooler bias to temperatures
  - Warmer biased weather may impact the eastern U.S. with rain expected to be lightest in the southeastern states and lower eastern Midwest after this first week of the outlook
- U.S. hard red winter wheat areas will be dry biased for the coming week to ten days
  - There is potential for frontal systems to pass through the region during the middle and latter part of this month which may trigger lines of showers and thunderstorms
    - Resulting rainfall will be greatest in the east, but at least some rain should fall in the high Plains region as well, but the volume of rain there will not be enough to seriously improve drought conditions
- A severe thunderstorm outbreak is possible in the Midwest, Delta and areas west through Arkansas to eastern Oklahoma today and Wednesday
  - Numerous reports of hail, damaging and tornadoes are expected from areas near the Mississippi River Valley into the heart of the Midwest and Tennessee River Basin
  - As reported on Friday, March 24, by World Weather, Inc. years that start off with a near record pace of tornado reports usually continue to follow that pace during the spring and Friday's severe weather and that expected Tuesday will continue to show verification on that study
- Canada's Prairies will continue missing significant precipitation events in the coming week, but may get a few brief periods of rain and snow during the middle and latter part of this month
  - No drought busting precipitation events are expected, but relief from dryness and a little topsoil moisture improvement is expected
    - These changes are still ten days away
- California's break from stormy weather is expected to last no more than ten days with a return of rain and mountain snowfall possible a little later this month
  - Flood potentials are high for rivers and streams that run from the Sierra Nevada to the coast
- Precipitation will occur in the U.S. Pacific Northwest periodically later this week into next week and the light moisture will be good in raising topsoil moisture after lighter than usual precipitation bias in the Yakima Valley and neighboring areas
- West Texas cotton, corn, sorghum and wheat production areas continue much too dry and frequent bouts of high wind have occurred and will continue to occur resulting in blowing dust
  - Some rain potential will improve later this month, but a big general soaking of moisture is unlikely
- U.S. Delta and southeastern states will be wet biased later this week and early in the weekend and then the area will dry down and heat up for a while
- Southeastern Canada's crop areas are favorably moist with little change likely
- China's upper Yellow River Basin and central parts of Inner Mongolia received 0.60 to nearly 3.00 inches of rain Sunday night into Monday and moved east across a big part of east-central China Monday into this morning producing another 0.35 to nearly 2.00 inches in the central Yellow River Basin
  - The moisture will shift to the east today passing through the lower Yellow River Basin and into the North China Plain and a part of the Northeast Provinces today and Wednesday
    - Another 0.30 to 1.50 inches is expected in areas to the east today and Wednesday
    - All of the rain will bolster soil moisture for use by wheat and other winter and spring crops
      - Spring planting will likely advance swiftly once the topsoil begins to firm

## Terry Reilly Grain Research

0

- China's Yangtze River Basin will receive waves of rain during the next ten days
  - o Rain totals of 1.00 to 6.00 inches will occur by late this weekend inducing some local flooding
  - o Some rain already began impacting the region overnight
- India and Pakistan will see much drier weather over the next two weeks
  - $\circ$   $\;$  A few showers will occur, but the potential impact on winter crops will be low
  - o Recent rain will support aggressive early season cotton planting
  - Wheat will benefit greatly from the change
- Yunnan, China is too dry and needs moisture for early season corn and rice as well as other crops
  - Dryness will continue in the province cutting into rice and corn planting and production potential as well as some other crops
- Southern Argentina, Uruguay and southern Rio Grande do Sul, Brazil are unlikely to receive much precipitation in the next week
  - o The drier bias will support crop maturation and harvest progress
  - $\circ$   $\;$  Scattered showers and thunderstorms will develop in the following weekend
- Center south Brazil will experience increasing rainfall later this week into next week
  - The moisture will help to saturate the topsoil once again in support of Safrinha and other late season crops
    - A part of the region has been drying out recently and this will help to reverse the trend and saturate the soil again before seasonal rains end later this month
- Northern and central Argentina precipitation during the next ten days will be sufficient to maintain favorable late season crop development, but it may also interfere with early season summer crop maturation and harvest progress
- A tropical cyclone may form east southeast of the Philippines late this week and will be closely monitored for possible influence on the archipelago this weekend or next week
  - The latest computer forecast model runs keep the storm over open water well to the east of the nation through most of next week
- Southeast Asia rainfall will continue favorably distributed for the next ten days to two weeks; this is true for Indonesia, Philippines and Malaysia as well as the maintain crop areas
  - Mainland areas will not receive as much rain as usual
    - March was notably drier biased
- Eastern Africa precipitation will be sufficient to support favorable coffee, cocoa and, rice and sugarcane development as well as other crops
- Turkey will be the wettest Middle East nation in the coming week while net drying occurs in other areas
  Recent precipitation has been good for wheat development and rice and cotton planting
- Spain will continue dry biased for at least another week and possibly for 8-9 days
- Portions of North Africa received rain Sunday and Monday mostly in northeastern Algeria and far northern Tunisia
  - Improving topsoil moisture should improve crop development, but most other areas in northern Africa are still too dry and in need of rain
- Western Europe will be drier biased over the coming week while Eastern Europe is sufficiently wet to bolster topsoil moisture
- Southeastern Europe rain has brought relief to drought stricken areas in the past 24 hours and more rain is expected today
  - Relief from drought is occurring in the lower Danube River Basin and parts of Romania
    - Some delay to fieldwork is expected
- Western CIS weather is advertised to be not as wet this week in western Russia and the Baltic States as suggested last week, but wetter in Ukraine, southern Belarus and western parts of Russia's Southern Region

- Sufficient moisture is expected throughout the western CIS to maintain a good prospect for winter and spring crops throughout the region
- Drying in western Russia will be great for improving topsoil moisture for spring fieldwork many areas are too dry
- West-central Africa rainfall is expected periodically in the next two weeks to support ongoing coffee, cocoa, rice and sugarcane development
  - A boost in rainfall is needed in cotton production areas to support the best planting environment
- Central Asia cotton and other crop planting is under way and advancing relatively well with adequate irrigation water and some timely rainfall expected
- Limited rainfall in eastern Australia will be great for summer crop maturation and harvesting
- A boost in precipitation will be needed in southern Australia in the next few weeks to support wheat, barley and canola planting
  - o The outlook is favorable
- South Africa weather will be mostly good over the next two weeks with a mix of rain and sun supporting corn, sorghum, sunseed, soybeans, rice, cotton, citrus sugarcane and other crops
  - Rainfall will be limited in this first week of the outlook and then increase this weekend and next week
  - Production potentials are high and late summer weather is mostly very good
- Mexico drought will continue this month, although there will be some periodic opportunity for rain in eastern parts of the nation through much of the next ten days
- Central America rainfall will be greatest in Guatemala and from Costa Rica to Panama during the next ten days
  - $\circ$   $\;$  Net drying is likely in portions of Honduras and Nicaragua
- Southeastern Canada's corn, wheat and soybean production region is favorably moist and poised for a good start to spring, although fieldwork is still a few weeks away
- Today's Southern Oscillation Index was -4.13 and it was expected to move erratically lower over the next few days

#### Corn

- Corn traded lower from the onset from fund selling and profit taking. Widespread commodity selling in the agriculture markets added to the negative undertone. The CK/CZ firmed today. Thoughts behind it could be related to the recent strong export developments and South American hedging. Negative US jobs data sent US stocks lower and prompted some outside commodity fund selling.
- Conab reported Brazil second corn planting progress at 96%, 5 points above the previous week and compares to nearly 100 percent year earlier.
- The weather forecast for the US calling for improving planting progress bias WCB (temperatures warm this week). But wet conditions and the threat of the large snowpack across the upper northwestern Corn Belt is threatening slow planting progress that could lead to switching from corn to soybeans.
- A Bloomberg poll looks for weekly US ethanol production to be down 1,000 thousand barrels to 1002k (990-1020 range) from the previous week and stocks down 159,000 barrels to 25.368 million.

Updated 03/31/23 May corn \$6.00-\$7.15 July corn \$5.75-\$7.00

#### Soybeans

- CBOT soybean prices fell led by the back months on profit taking and South American harvest pressure.
- Soybean oil started the day session mixed, underpinned by the strength in US energy markets, but as those markets pared gains and other commodity markets trended lower, soybean oil sold off, giving up more than 90 points for the May. July was down 88 points.
- Soybean meal was sharply lower by \$6.80 basis the May contract. Argentina will release details on the new soybean dollar on Wednesday. Argentina's 1st soybean dollar was set at 200 pesos and Sep 5-30 resulted in 13 MMT sales. The 2<sup>nd</sup> & was 230 pesos (around 165 ex rate late Nov) and Nov 28-Dec 31 resulted in 5.1 MMT sales. The third \$ was rumored to be set at around 310 pesos. 2023 export campaign for Argentina soybean meal export has a long time to go, but a few estimates for global trade flows predict Brazil will take over Argentina as the largest global supplier of soybean meal this (Argentina) crop year (April-March). Argentina soybean meal export premiums declined today while Brazil fob appreciated. Brazil fob soybean meal is the cheapest among the three major exporting countries and about \$30 per ton discount to US Gulf fob.

- Both weaker soybean oil and meal pressured crush margins. With May soybeans firming over the back months, May crush fell 20.75 cents to \$1.0200. On March 7<sup>th</sup>, the session high was \$2.25. Cash crush margins are about \$1.00 lower from a month ago for central IL.
- Conab estimated Brazil soybean harvesting progress at 74.5 percent as of April 1, up 5 points from the previous week and below 81 percent year ago. They are using 151.4 million tons for production. AgRural was at 76 percent as of last Thursday.
- StoneX: Brazil soybean crop 157.7 vs. 154.7 previous.

## Wheat

 US wheat futures started higher after USDA reported initial spring winter wheat ratings worst since 1996 but prices ended lower on profit taking despite a sharply lower USD (down 52 points as of 2:08 pm CT).

- Paris May wheat was down 0.75 euro or 0.3% at 255.25 per ton.
- US winter wheat ratings are not expected to improve much, if any, next week. Kansas and surrounding Great Plains states will be mostly dry over the next ten days. Note combined TX, OK, KS, CO, and KS winter wheat plantings represent 61 percent of the total US planted area.
- Canadian wheat areas are very dry, and Commodity Weather Group noted the season is off to its second driest start in 45 years.
- The USDA Attaché estimated 2023-24 (April-March) wheat production at a large 108 million tons, based on good weather conditions, up from their own 100 million ton projection for 2022-23. However, recall India's largest producing states saw unfavorable weather a week ago that included hail. Producers and local government reported crop damage.

https://apps.fas.usda.gov/newgainapi/api/Report/DownloadReportByFileName?fileName=Grain%20an d%20Feed%20Annual New%20Delhi India IN2023-0025

• India plans to still procure wheat even if yields come in below government standards after hair and heavy rain damaged the crop late March. India looks to buy 34.15 million tons of wheat this season from producers.

Export Developments.

- Jordan passed on 120,000 tons of wheat. They are in for barley on Wednesday.
- Japan in its weekly import tender seeks 78,732 tons of food wheat later this week from the US, Canada and Australia.

Japan food wheat import details are via Reuters as follows (in tons):								
COUNTRY	ТҮРЕ	QUANTITY						
U.S.	Dark Northern Spring(protein minimum 14.0 pct)	12,360 *						
U.S.	Hard Red Winter(Semi hard)	15,470 *

#### TO CLIENTS/PROSPECTS OF FUTURES INTERNATIONAL, SEE RISK DISCLOSURE BELOW:

#### THIS COMMUNICATION IS CONVEYED AS A SOLICITATION FOR ENTERING INTO A DERIVATIVES TRANSACTION.

Any trading recommendations and market or other information to Customer by Futures International (FI), although based upon information obtained from sources believed by FI to be reliable may not be accurate and may be changed without notice to customer. FI makes no guarantee as to the accuracy or completeness of any of the information or recommendations furnished to Customer. Customer understands that FI, its managers, employees and/or affiliates may have a position in commodity futures, options or other derivatives which may not be consistent with the recommendations furnished by FI to Customer.

The risk of trading futures and options and other derivatives involves a substantial risk of loss and is not suitable for all persons. In purchasing an option, the risk is limited to the prmium paid, and all commissions and fees involved with the trade. When an option is shorted or written, the writer of the option has unlimited risk with respect to the option written. The use of options strategies such as a straddles and strangles involve multiple option positions and may substantially increase the amount of commissions and fees paid to execute the strategy. Option prices do not necessarily move in tandem with cash or futures prices. Each person must consider whether a particular trade, combination of trades or strategy is suitable for that person's financial means and objectives.

This material may include discussions of seasonal patterns, however, futures prices have already factored in the seasonal aspects of supply and demand, and seasonal patterns are no indication of future market trends. Finally, past performance is not indicative of future results.

This communication may contain links to third party websites which are not under the control of FI and FI is not responsible for their content. Products and services are offered only in jurisdictions where solicitation and sale are lawful, and in accordance with applicable laws and regulations in each such jurisdiction.
