

Attached are our US soybean complex balance sheets.

*USDA: Private exporters reported sales of 197,000 metric tons of soybeans for delivery to unknown destinations during the 2022/2023 marketing year.*

### US mandate update

A late afternoon Bloomberg article reported that the Biden Administration is expected to roll out biodiesel quotas short of what the industry was pushing for after a “lobbying crush.”

<https://www.bloomberg.com/news/articles/2023-06-09/biden-plans-modest-biodiesel-quota-boost-after-lobbying-crush>

The EPA has up until the June 14<sup>th</sup> deadline to release mandates. “While the final targets are expected to be higher than the 2.82 billion gallon requirement originally proposed for this year, they are unlikely to hit the much higher volumes sought by biodiesel producers...”

*Final results when released will be posted here: <https://www.epa.gov/renewable-fuel-standard-program/news-notices-and-announcements-renewable-fuel-standard>*

*December proposed below*

Proposed Volume Targets (billion RINs)<sup>a</sup>

	2023	2024	2025
<b>Cellulosic biofuel</b>	0.72	1.42	2.13
<b>Biomass-based diesel</b>	2.82	2.89	2.95
<b>Advanced biofuel</b>	5.82	6.62	7.43
<b>Renewable fuel</b>	20.82	21.87	22.68
<b>Supplemental standard</b>	0.25	n/a	n/a

<sup>a</sup> One RIN is equivalent to one ethanol-equivalent gallon of renewable fuel.

Proposed Percentage Standards

	2023	2024	2025
<b>Cellulosic biofuel</b>	0.41%	0.82%	1.23%
<b>Biomass-based diesel</b>	2.54%	2.60%	2.67%
<b>Advanced biofuel</b>	3.33%	3.80%	4.28%
<b>Renewable fuel</b>	11.92%	12.55%	13.05%
<b>Supplemental standard</b>	0.14%	n/a	n/a

*The neutral USDA report did little for initial price reaction to CBOT soybean complex and grains. Traders today were focused on spot US soybean demand, technical breakout in soybean oil, product spreading, US weather, slow corn export demand, and USDA's outlook for ample global wheat supplies. Technical buying entered the Chicago wheat market post USDA report.*

### **Weekly Change %- July Positions (Paris Sep)**

SOY	1386.50	34.00	2.5%

OATS	358.50	21.00	4.7%
PALM OIL Q	3381.00	(14.00)	-0.4%

### **USDA June S&D report**

Neutral overall with exception of global wheat supplies increasing 10.4 million tons from the previous month to 800.2 million tons, 11.7 million tons above 2022-23. This is one of the most uneventful USDA monthly reports we have seen in a while. Prices were little changed after the report hit the wires, but soybeans and soybean oil rallied thereafter and grains remain mostly under pressure. The trade is already back to trading weather and demand. Next major report will be the June 1 stocks report which should give the trade a glimpse if USDA overstated the 2022 US soybean and corn crops.

### **USDA NASS briefing**

[https://www.nass.usda.gov/Newsroom/Executive\\_Briefings/index.php](https://www.nass.usda.gov/Newsroom/Executive_Briefings/index.php)

### **USDA OCE Secretary's Briefing**

<https://www.usda.gov/oce/commodity-markets/wasde/secretary-briefing>

there were no changes in US soybean supply, as expected. Same goes with corn. All wheat production increased 6 million bushels from May with HRW up 11 million, partially offset by a reduction in SRW by 4 million and WW by 1 million. USDA made no changes to any other wheat supply and demand categories for the old and new crop balance sheets. US all-wheat ending stocks were raised 6 million bushels. The trade was looking for a 7-million-bushel decrease. Look for minor adjustments to old crop all-wheat after the next round of trade balance data and food use is released. The US old crop corn carryout was increased 35 million bushels due to a 15-million-bushel reduction in imports that was more than offset by a 50 million decrease in exports. The 50 million drop in exports was more than we expected. USDA did not address the US corn for ethanol use of 5.250 billion bushels. We think they are still overstating this by at least 25

**Terry Reilly** Grain Research

Futures International | One Lincoln Centre, Suite 1450

W: 312.604.1366 | [treilly@futures-int.com](mailto:treilly@futures-int.com)

million, so we look for another increase in US 2022-23 corn stocks by at least that amount in the July update, assuming USDA does not deviate much from actual June 1 corn stocks when updated at the end of this month. New-crop US corn carryout increased 35 million tons to 2.257 billion, 55 percent greater than 2022-23. Look for new-crop prices to continue to grind lower if US weather improves. USDA lowered 2022-23 US soybean exports by 15 million bushels despite a higher-than-expected April Census export figure. With old crop commitments drying up, this could be justified, but it will all come down to how much of the current crop year commitments will be rolled into new-crop. USDA made no changes to its new-crop US soybean balance sheet. Overall US ending stocks for wheat, corn, and soybeans for both old and new crop came in near trade expectations.

The world balance sheets for 2022-23 reflected several minor changes to production and stocks. The carryout for all three major commodities came in near expectations as production estimates for Argentina corn and soybeans were near trade expectations. 2022-23 Argentina corn production was lowered 2 million tons to 35 million and soybeans lowered 2 million tons to 25 million tons. With nearly all the Argentina soybean crop collected, we think USDA has room to lower output next month by 2-3 million tons, based on much of the trade penciling in a 21-million-ton estimate. For corn, Argentina collected a third of its crop, so the outcome of the size of the crop is yet to be determined. What was interesting in this report was 2023-24 global wheat production. At 800.2 million tons, that is 10.4 million above May, and 11.7 million above year ago. Global wheat stocks were upward revised 6.4 million tons to 270.7 million, a 1.5% increase from 2022-23. The question remains how much of that 2023 global wheat production will be food grade wheat. JCI via Bloomberg article mentioned China could lose 10 million tons of food grade wheat from recent heavy rains, that will be used for feed. China wheat imports were raised 1.5 MMT to 12.0 MMT. USDA will likely address some of the global supply issues in their upcoming reports over the summer. Note there was no change to Australian wheat production of 29 million tons, which could be overstated 3-3.5 million tons. Russia wheat output was raised to 85 MMT from 81.5 previous.

For the rest of the month look for the trade to be sensitive to spot US demand and changes in the Northern Hemisphere weather outlooks.

## World Weather Inc.

### WEATHER TO WATCH

- Frost and freezes are expected in northwestern Russia Sunday and Monday, although the impact on production should be low
  - Most crops in the region will handle the cool weather without experiencing any serious damage to production potential
    - Wheat is not as far advanced in northwestern Russia as it is in southern areas where there is no risk of frost
- Tropical Cyclone Biparjoy remains over the central Arabian Sea today and continues to disrupt the normal southwest monsoon flow across the region keeping India drier than usual in the south and eastern parts of the nation
  - The cyclone is expected to drift slowly to the north during the weekend and early next week staying over open water in the northern Arabian Sea by Tuesday
- Typhoon Guchol remains over open water in the East Philippines Sea with very little potential for land impact
  - The storm will turn to the northeast this weekend and continue in that direction next week staying well to the southeast of Japan's main islands
- Tropical Cyclone 03B was located over the northern Bay of Bengal today and will drift into northwestern Myanmar this weekend with a low impact of moderate to heavy rain and no damaging wind
  - Rice and sugarcane will be impacted, but no crop damage is expected
- A tropical disturbance moving into southwestern China produced torrential rain and serious flooding over the past two days with roughly 42 inches of rain being reported at one location in southern Guangxi
- There are no tropical disturbances that have potential for development in the eastern Pacific Ocean, Caribbean Sea, Gulf of Mexico or Atlantic Ocean during the coming week

**Terry Reilly** Grain Research

Futures International | One Lincoln Centre, Suite 1450

18 W 140 Butterfield Rd. | Oakbrook Terrace, IL 60181

W: 312.604.1366 | [treilly@futures-int.com](mailto:treilly@futures-int.com)

- U.S. Midwest will experience cooler temperatures this weekend with a short term bout of reinforcing coolness early next week
  - High temperatures may come down to the upper 60s and 70s for a few days reducing crop stress, but rain does not fall significantly enough to bolster soil moisture in a major way leaving concern about the long term outlook
- West Texas weather will trend warmer with only a few showers expected for a while
  - This trend will favor great planting and early season crop development potential after recent rain
    - Southwestern parts of West Texas never received heavy rainfall, but enough fell for dryland crop planting
      - Follow up rain will be needed especially with temperatures reaching the 90s and getting closer to 100 next week
- Southeastern U.S. and Delta are expecting periodic rain and seasonable temperatures during the next two weeks supporting good summer crop development
- U.S. hard red winter wheat areas and other crops in the central Plains will experience a good mix of weather during the next ten days to two weeks
  - Summer crops will thrive in this environment
  - Winter crop filling, maturation and harvesting should advance well
- High pressure ridge over western Canada this weekend and early next week will induce another five days of very warm temperatures and limited rainfall in the Prairies and across a part of the northern U.S. Plains
  - High temperatures in the 80s and lower to a few middle 90s are expected
- High pressure ridge in western Canada breaks down during the middle part of next week and a trough of low pressure comes into to replace it
  - This situation raises the potential for cooling in much of Canada's Prairies
  - Showers and thunderstorms should increase in the Prairies during the middle to latter part of next week, although atmospheric moisture in the region will be restricted
  - Alberta will get some needed rain during the middle to latter part of next week resulting in the potential for temporary relief from chronic dryness
- Sufficient rain will fall in Alberta, Canada's driest region during the second half of next week to stop the decline in crop conditions and induce a short term bout of crop improvement
  - Follow up rain will be very important
- U.S. northern Plains and Canada's southern Prairies will receive some needed rain in the latter part of next week and into the following weekend which may temporarily help improve topsoil moisture, but a better opportunity for rain should evolve early in the week of June 19
- Ontario and Quebec, Canada will get some welcome rain next week while dry and mild to cool weather occurs over the balance of this week and during the weekend
- Mexico drought will continue over the next ten days with rain only falling in eastern parts of the nation and in the far south
  - Seasonal rains are normally moving northward through southern and some central parts of the nation by now
- Northwestern Europe will get some rain this weekend and then dry down again for a while next week
  - The moisture will provide a short term bout of improved crop development, though more rain is needed
- Northeastern Europe will continue too dry and crop stress will prevail as temperatures get to warmer than usual levels while rain is largely limited
- Southern Europe remains favorably moist and established crops are performing well
  - There is some need for greater sunshine and warmer weather, but most crops are dealing with the milder and wetter scenario relatively well

## **Terry Reilly** Grain Research

Futures International | One Lincoln Centre, Suite 1450

18 W 140 Butterfield Rd. | Oakbrook Terrace, IL 60181

W: 312.604.1366 | [treilly@futures-int.com](mailto:treilly@futures-int.com)

- Eastern Russia's New Lands and northern Kazakhstan will experience some showers and thunderstorms over the next week ten days, but greater rain will be needed to reduce concern over long term crop development after recent hot and dry conditions
- India rainfall will continue limited away from the coastal areas for much of the next ten days
  - Rainfall so far this month has been well below normal in the southern half of the nation and in some far eastern production areas
- Southeast Asia rainfall continues to occur routinely enough to support most crops favorably
- Northern Europe temperatures will be warmer than usual this week and that will create a more stressful environment for crops as they deal with another week of dry conditions
- Southern Europe has been receiving frequent rainfall in recent weeks and the trend will continue for another week
- Eastern CIS New Lands will begin to receive some timely rainfall the remainder of this week bringing some relief to the drier biased areas of Kazakhstan and Russia's eastern New Lands
  - The precipitation will be sporadic helping some areas more than others
    - Kazakhstan is not likely to get nearly as much rain and unirrigated crop stress will continue
- Russia's Volga River Basin will be drier than usual for this first week of the two week outlook raising crop moisture stress for some crops since the ground is already drying out
  - There is some potential for relief after June 14
- Summer crops in China are expected to see a mostly good mix of rain and sunshine during the next ten days
  - Some far southern China crop areas may become a little too wet during the next ten days.
  - Northeast China will see sufficient rain to maintain a good outlook for corn, soybeans, sugarbeets and spring wheat
    - There is a dryness concern from northern Jilin into Inner Mongolia and "some" relief is possible in the next couple of weeks, although more rain will be needed
- Xinjiang, China will experience more seasonable temperatures over the next two weeks
  - The province has struggled with coolness in recent weeks and crop development is behind the usual pace
    - Production potentials have decreased because of some reduced area planted and due to the poor early season start to crop development
      - There is concern over early season frost and freeze potentials coming along before the crop is fully mature
- Monsoonal rainfall is expected to occur in the mainland areas of Southeast Asia during the next two weeks resulting in improved sugarcane, rice and coffee conditions among other crops like corn
  - Some caution is needed since some of the computer forecast model data is exaggerating the anticipated rainfall
- Philippines, Indonesia and Malaysia will see a favorable mix of weather during the next two weeks supporting most crop needs
- Australia weather over the next ten days trend a little drier, but recent rain has improved crop and field conditions in many production areas
  - The moisture will be ideal for wheat, barley and canola establishment
  - A boost in rainfall will be needed in Queensland and in interior South Australia and in some northern and eastern Western Australia crop areas
- South Africa rainfall will be restricted over the next ten days, though some rain will benefit southwestern winter wheat, barley and canola production areas
- West-Central Africa rainfall will be favorably distributed for coffee, cocoa, sugarcane and cotton as well as rice during the next ten days

---

- East-central Africa has been and will continue to be favorably distributed from Uganda and southwestern Kenya to Ethiopia through the next ten days with western Ethiopia wettest relative to normal
- Argentina weather over the next ten days will not provide much rainfall which will favor fieldwork in many areas, but no relief from dryness is likely in the southwest
- Brazil weather during the coming will be more unsettled than in previous weeks resulting in some increases in topsoil moisture
  - Rain is expected in southern Brazil and Paraguay Sunday into Wednesday of next week, June 11-14
  - A greater amount of rain may impact areas from Paraná to northern Rio Grande do Sul
- There are no tropical cyclones in the Atlantic Ocean Basin today and none are expected
- Tropical Cyclone Guchol in the Philippine Sea poses no threat to land
- Today's Southern Oscillation Index was -17.90 and it will move higher over the next week

## Corn

- Corn futures traded lower from an upward revision of the US old and new-crop stocks by USDA and a mostly unchanged US weather forecast calling for rain for the central and parts of the upper Midwest one time or another through Monday. US corn for ethanol use was not revised so look for US 2022-23 US stocks to potentially increase next month, assuming no major deviation in corn for feed during the previous quarter. See above for USDA recap.
- July/September corn spreads eased today by 2 cents on profit taking and an unchanged US new crop balance sheet other than a higher carrying resulting in a 35 million bushel increase in 2023-24 stocks.
- Today was day 3 of the Goldman roll.
- Buenos Aires Grains Exchange reported about a third of the Argentina corn crop had been collected and production at 36 million tons. The wheat crop is expected to total 18 million tons.
- USDA will update their S&D estimates later today. For South America, look for them to cut current crop year Argentina soybean and corn production by 3 and 1 million tons, respectively. No changes are expected for Brazil corn and soybean production, for 2022-23. We expect no change to US 2023 corn or soybean harvested & yields from May.

## Export developments.

- Results are awaited for Algeria seeking up to 140,000 tons of corn for July-Aug 15 shipment.

### Price outlook:

**July corn \$5.75-\$6.35**

**September corn \$4.50-\$5.75**

**December corn \$4.25-\$5.75**

### Soybeans

- CBOT soybeans traded higher led by old crop before the release of the USDA report from the USDA 24-hour old crop sale announcement to unknown destinations and sharply higher soybean oil. That them remain unchanged post USDA report. There were no major surprises in USDA's US and world S&D update. As expected Brazil soybean production went up 1MMT (we were looking for unch) and Argentina was revised lower 2MMT (we were looking for a 3MMT reduction).
- During the session soybean meal turned and ended mixed. Soybean oil ended 169 to 209 points higher (bull spreading). Earlier this week there was talk US food end users were seeking coverage for soybean oil. Meanwhile, biofuel companies have been actively seeking coverage for a few weeks.
- There are rumors that the EU is importing US soybeans to crush and sell back biodiesel to the US. This already happened before.
- On paper US soybean oil stocks are large and there is no need to currently increase domestic crush to get to the oil, but US industrial and food demand for the product has increased this month.

- China in its monthly S&D update raised 2022-23 edible vegetable oil production by 690,000 tons to 29.9 million tons in large part to an upward revision to rapeseed oil production. With a rise in rapeseed imports and higher rapeseed oil output, China lowered their soybean oil import estimate for 2023-24 by 700,000 tons to 500,000 tons, a 58 percent decrease from the previous month, but still 100,000 tons above the 2022-23 season. Rapeseed oil production for 2022-23 was projected at 7.2 million tons, up from the May outlook of 6.5 million tons. China rapeseed imports since January 1 are running at around 1.2 million tons, about 35 percent above the same period year earlier. China's CASDE reflected minor changes to other commodity estimates for 2022-23 and for 2023-24, there were no changes in commodity estimates other than the lower soybean oil import projection.
- (Reuters) Canada will join dispute settlement consultations between the U.S. and Mexico over genetically modified (GM) corn as a third party..."Canada shares the concerns of the U.S. that Mexico's measures are not scientifically supported and have the potential to unnecessarily disrupt trade in the North American market," Canadian Agriculture Minister Marie-Claude Bibeau and International Trade Minister Mary Ng said in a joint statement.
- Buenos Aires Grains Exchange reported Argentina's soybean harvest progress at 94 percent complete and production at 21 million tons.
- Rosario grains exchange noted truck arrivals into ports were down 62 percent during the March-May period from a 5-year average.

**July/August soybean oil spread.** This was at a carry a couple weeks ago. Talk of US industrial then food processor demand fueled this big move this week.

#### Export Developments

- Under the 24-hour announcement system, US exporters sold 197,000 tons of soybeans to unknown for 2022-23 delivery.
- Iran was thought to have passed on 120,000 tons of soybean meal from Brazil for July and/or August shipment.
- Algeria is in for 35,000 tons of soybean meal today for July 1-15 shipment.

## Wheat

- US wheat futures ended mixed with Chicago higher (technical buying) and KC & MN lower despite rain expected for the Great Plains one time or another through late next workweek. Not all areas will see rain but any precipitation will be welcome for the central and northern growing areas.

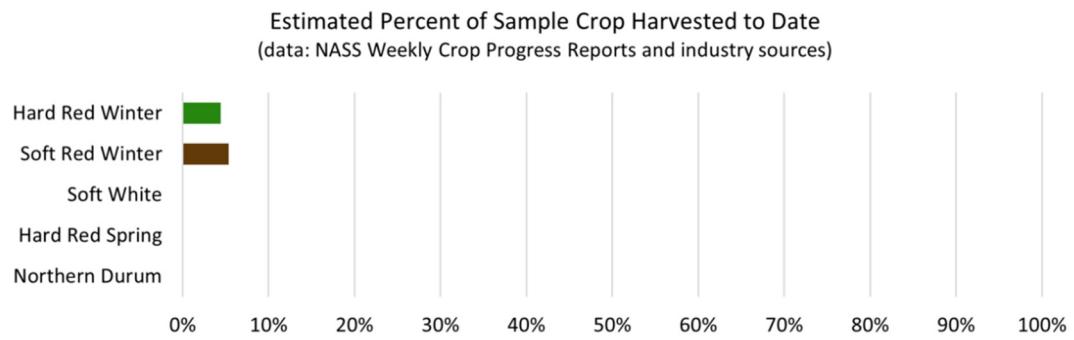

## Terry Reilly Grain Research

Futures International | One Lincoln Centre, Suite 1450

18 W 140 Butterfield Rd. | Oakbrook Terrace, IL 60181

W: 312.604.1366 | treilly@futures-int.com

- Canadian Prairies have an opportunity for rain for the western and central areas mid to late next week as the high-pressure ridge breaks down.
- A Bloomberg article citing JCI mentioned the share of China's feed wheat will likely increase by 10 million tons to about 35 million, that could increase import demand. USDA left their China 2023-24 China wheat production estimate unchanged at 140 million tons, but raised imports by 1.5 million tons to 12.0 million (137.7 and 14.0 million, respectively, for 2022-23).
- US Wheat Associates noted HRW wheat harvesting progress will advance across central OK during the upcoming wheat and that SW in the Pacific Northwest is in stable condition.

- September Paris milling wheat officially closed 2.25 euros higher, or 1.0%, at 234.50 euros a ton (about \$252.00 ton).
- French wheat crop ratings for the week ending June 5 fell to 88 percent G/E from 91 percent previous week and 93 percent two weeks ago. Year ago, it was at 66 G/E.

#### Export Developments.

- Tunisia passed on 100,000 tons of soft milling wheat for July 1 through August 15 shipment.
- Morocco seeks 500,000 tons of feed barley on June 14.
- Taiwan seeks about 56,000 tons of US wheat from the US on June 14 for July 31-August 14 shipment off the PNW.

#### Rice/Other

- Results awaited: South Korea seeks about 62,200 tons of rice, 44,400 tons from China and rest from Vietnam, on June 8, for arrival between September 1-30.

TO CLIENTS/PROSPECTS OF FUTURES INTERNATIONAL, SEE RISK DISCLOSURE BELOW:

THIS COMMUNICATION IS CONVEYED AS A SOLICITATION FOR ENTERING INTO A DERIVATIVES TRANSACTION.

Any trading recommendations and market or other information to Customer by Futures International (FI), although based upon information obtained from sources believed by FI to be reliable may not be accurate and may be changed without notice to customer. FI makes no guarantee as to the accuracy or completeness of any of the information or recommendations furnished to Customer. Customer understands that FI, its managers, employees and/or affiliates may have a position in commodity futures, options or other derivatives which may not be consistent with the recommendations furnished by FI to Customer.

The risk of trading futures and options and other derivatives involves a substantial risk of loss and is not suitable for all persons. In purchasing an option, the risk is limited to the premium paid, and all commissions and fees involved with the trade. When an option is shorted or written, the writer of the option has unlimited risk with respect to the option written. The use of options strategies such as a straddles and strangles involve multiple option positions and may substantially increase the amount of commissions and fees paid to execute the strategy. Option prices do not necessarily move in tandem with cash or futures prices. Each person must consider whether a particular trade, combination of trades or strategy is suitable for that person's financial means and objectives.

This material may include discussions of seasonal patterns, however, futures prices have already factored in the seasonal aspects of supply and demand, and seasonal patterns are no indication of future market trends. Finally, past performance is not indicative of future results.

This communication may contain links to third party websites which are not under the control of FI and FI is not responsible for their content. Products and services are offered only in jurisdictions where solicitation and sale are lawful, and in accordance with applicable laws and regulations in each such jurisdiction.
